毕业或工作前就结婚 #101001

It is argued that getting married before finishing school or getting a job is foolish. To what extent do you agree or disagree? #101001

范文

It is often argued that getting married before finishing school or getting a job is foolish. From my own perspective, I largely agree with this view, as early marriages can often undermine academic outcomes and create financial pressure, particularly for young adults who have not yet established independence.

To begin with, getting married before graduation may adversely affect academic performance. To elaborate, marriage introduces additional responsibilities, such as emotional demands and time commitment, so it will reduce students' focus on their studies and lead to lower grades. For example, research conducted by the University of Sydney revealed that students who marry while in university are more likely to report difficulties in maintaining consistent academic progress.

Moreover, marrying before securing a job can impose a significant financial burden on young couples. To illustrate, without a stable income, essential living costs such as rent and utilities can become a major financial challenge for young couples, not to mention purchasing a house and supporting children, which can increase expenditure sharply. For instance, a study by Monash University indicated that couples who marry before securing a stable income are more likely to experience financial stress.

In conclusion, getting married before finishing school or getting a job is generally unwise, as it may distract individuals from academic goals and place them under financial strain, potentially limiting both personal growth and professional development.

(226 words)

成长环境是否影响个人成就， 如何影响 #101002

Nowadays, people believe that environment influences their accomplishment. Some people think their success and accomplishment were influenced by the places where they grew up. Do you think the environment does or does not affect people's accomplishment and how it affects? #101002

范文

In recent years, whether the environment influences people's accomplishments or not has caused numerous controversies and drawn the attention of the public. Some people hold the view that their success and accomplishments were influenced by the places where they grew up, while others have a different opinion. As far as I am concerned, I strongly agree with the former argument, which can be supported by the following reasons.

First and foremost, the most obvious factor lies in the fact that the milieu directly influences people's behaviors and qualities. To be more specific, people always mimic behaviors of the people around them during their phase of development, which means that people tend to learn from their surroundings to form their personality. This can be proved by my own experience that my mother is very hard-working, so I tried to study as hard as she did when I was young.

Furthermore, another point to be taken into consideration is that the well-organised education system can provide comprehensive education and cultivation. In other words, comprehensive education provides more resources so that students can broaden their horizons and become more cultured, leading to success and accomplishment. This can be established by a recent survey by Oxford University, which states that 76% of people with great success or accomplishment received a quality education.

From what has been discussed above, we may safely conclude that some people's success and accomplishments were influenced by the places where they grew up.

(243 words)

法律改变人的行为 #101003

Some people think human behaviors can be limited by laws, others think laws have little effect. What is your opinion? #101003

范文

Laws are important to current society because they distinguish between right and wrong. Some people think human behaviors can be restrained by laws, whereas others think laws have little influence. Personally speaking, I strongly believe that laws can have an impact on human behaviors.

On the one hand, laws are restrictive approaches to prevent the emergence of crime events. To be specific, severe punishments can stop potential criminals, as laws can deter them from robbing, shoplifting, and bribery. Heavy sentences make them fear the consequences of breaking laws or regulations, and this encourages them to behave decently. For example, this can be established by a recent study of Oxford University, which stated that laws can prevent 70% of crimes from taking place.

On the other hand, laws provide general guidance for people, which is obvious because they give correct instructions when people are facing an ethical dilemma or moral hazard. It teaches individuals how to deal with complex issues and introduces a boundary between right and wrong, which means it can prevent people from doing unethical things. For instance, recent research conducted by Melbourne University shows 80% of laws ensure people do the right things.

In conclusion, I deeply believe that laws can limit human behaviors as a restrictive approach to prevent crimes and also as general guidance for citizens.

(219 words)

员工参与决策的利弊 #101004

In some companies, some employers involve employees in the decision-making process of products and services. What are the advantages and disadvantages of such a policy? #101004

范文 1

Nowadays, decision-making has played an important role in a corporation's operations. Some people indicate that getting employees involved in decision-making has huge benefits, while others think that senior executives should not get them involved due to the detrimental impacts. Personally speaking, I strongly agree that making employees participate in decision-making has both advantages and disadvantages.

On the one hand, making employees take part in decision-making can lead to a more professional final decision. Since a person working in a particular field for a long time can provide insight into better management, the final decision would be influenced in a more professional and inspirational way. For instance, the companies in Silicon Valley always encourage their staff to take part in decision-making, so they always make a comprehensive and accurate decision due to the advice from IT experts with extensive experience.

On the other hand, having employees participate in decision-making may result in higher labor costs. As involving a huge number of employees in decision-making will generate numerous opinions, companies need to assign and pay for more staff to collect and analyze these opinions before concluding a final decision. For example, Google started in 2018 to get employees involved in decision-making related to smartphone design, and they had to allocate 5 more senior managers, leading to significant costs in terms of salary payments and bonuses.

To sum up, getting employees involved in the decision has both merits and demerits. It depends on the specific situation to weigh the two sides of the coin.

(251 words)

In some companies, some employers involve employees in the decision-making process of products and services. What are the advantages and disadvantages of such a policy? #101004

范文 2

In some companies, employers let employees be involved in the decision-making process of products and services. Personally speaking, this management method creates both advantages and disadvantages.

Firstly, one advantage of letting employees attend a decision-making meeting is that it can increase employees' work performance. To be more specific, when employees are involved in companies' decision-making processes, they will feel respected, improving their enthusiasm to work. For example, a recent report from Microsoft can further support my idea, which mentions that when employees got involved in decision-making meetings for a newly developed software, their work efficiency increased by at least 89%.

On the other hand, the disadvantage for some employers to involve employees in the decision-making process about their products and services is that such a policy will slow down operational efficiency. To be more specific, employees involved in the decision-making process need to follow several complex procedures in accordance with the regulatory framework of companies, and this consumes too much time, reducing efficiency. To further support my statement, an article published in China Daily revealed that 50% of employers believed that employees participating in the decision-making process slows down the working efficiency of companies.

With all the points above, engaging employees in the decision-making process brings both benefits and problems. Therefore, companies should weigh the advantages against the disadvantages before determining the strategy.

(223 words)

书面考试是否有效评估学习成果 #101005

The formal written examination can be a valid method to assess students' learning. To what extent do you agree or disagree? #101005

范文

There is no doubt that the formal written examination has been a conventional way to evaluate students' performance. Some people argue that this is the best way for assessing students' performance, whereas others believe that more innovative methods should replace such an old-fashioned form. Personally speaking, the formal written examination is a valid method to assess students' learning process, which can be supported as follows.

To start with, the most important reason is that the formal written examination can evaluate whether students have established a solid foundation of the subjects they have learned in this term. To be specific, the formal written exam is an integrated test, which is to test how well the students have mastered the knowledge, and the results can reflect the students' achievements through the provision of test marks. To take my own experience as an example, I did not grasp the concept of my physics course, which was indeed reflected in the low score of the final exam.

In addition, another reason is that the formal exam can assess how much time students spend reviewing their courses. To illustrate, if students spend enough time on each subject and have acquired a deep understanding of it, they will get good scores on the formal exam. For example, there is research by Oxford University, which states that over 76% of the students who spend sufficient time on study can gain good academic performance from the exams, which means a formal written exam is a valid method of assessment.

With all the points above, the conclusion can be drawn that the formal written examination is a valid method because it can directly evaluate students' performance. In this regard, schools should promote the use of such exams.

(288 words)

旅行对于教育的必要性 #101006

“The value of travel has been overrated”. It is said that one can be a brilliant scholar without leaving one's home base. Do you think travel is a necessary component of a quality education? #101006

范文

Some people believe that studying overseas is overrated and that there is no value to travel overseas for better education, whereas others have the opposite opinion. Personally speaking, I totally believe that it is necessary to study abroad for better education.

The first and most important reason for my belief is that studying abroad can enhance students' learning ability. To be specific, traveling overseas for education can be a challenge for students because of the language and cultural barriers, which drives them to study harder. In this case, students are pushed to improve their learning ability to better outperform their peers. For example, an investigation conducted by Melbourne University shows that 80% of students who are studying overseas claimed they have enhanced their learning ability.

On the other hand, the second reason for this argument is that students can benefit from better language learning when they study abroad. To illustrate, traveling overseas to pursue their academic goals provides a multitude of opportunities to speak with foreigners who are experts in their language, so this offers students a great immersive language learning experience which can equip them with more skills and vocabulary of the foreign language. According to the annual report of the Australian government, more than 70% of the international students believe that they have achieved great progress in English Learning after they arrived in Australia.

With all the points above, the conclusion can be drawn that it is necessary to study abroad because this educational opportunity can improve students' learning ability and help them master a foreign language.

(259 words)

欠发达国家的旅游业 #101007

For a less developed country, the disadvantages of tourism are as great as the advantages. Please discuss this statement, and give and explain your opinion. #101007

范文 1

Recent years have witnessed a significant increase in tourism in less developed countries, which has brought a heated debate about the advantages and disadvantages of this trend. Views on this issue vary from person to person. From my perspective, there are both advantages and disadvantages of tourism in developing countries.

On the one hand, the key benefit of tourism in developing countries is that it can boost the local economy, which is obvious because the influx of tourists can provide many employment opportunities to the local job market and promote local businesses, including restaurants, supermarkets, and hotels, which in turn boost the local economy. According to the latest report published by the World Bank, tourism is the primary source of income in Cambodia, which increases the local GDP by 60%.

On the other hand, the disadvantage of tourism in less developed countries is that the development of this industry has detrimental impacts on the local environment. To illustrate, tourism often comes with pollution, including increased carbon footprints and rubbish disposal. While developing countries have less capacity to handle these environmental challenges, failure to address these problems can lead to exacerbated greenhouse effects and land pollution. The data published by the UN revealed that tourism is responsible for more than 60% of environmental deterioration in less developed countries.

To summarize, although it is hard to arrive at an absolute conclusion on this complicated issue, I am still fully convinced that the advantages and disadvantages of tourism both exist in less developed countries.

(251 words)

For a less developed country, the disadvantages of tourism are as great as the advantages. Please discuss this statement, and give and explain your opinion. #101007

范文 2

There is no doubt that tourism development is imperative in developing economies. Some people argue that development should be restricted because of the problems brought by tourism, whereas others disagree. Personally speaking, I think every coin has double sides, and there are both advantages and disadvantages of tourism in developing countries.

The key benefit of tourism in less developed countries is that it helps with the economic growth in these regions, which is obvious because developing tourism attracts consumption from international visitors, and prosperous tourism can improve the local employment rate, resulting from the boost of the service industry. To further support the above statement, an investigation conducted by Melbourne University stated that 60% of economic growth is brought by tourism in less developed countries in the year 2023.

On the other hand, it is arguable that tourism in less developed countries also has a negative impact on the local environment, which is reasonable because garbage pollution and improper human activities cause damage to the natural environment. This can be supported by a recent study by Oxford University, which stated that 79% of people voted that pollution is the main drawback of tourism in less developed regions.

In conclusion, the advantages of tourism in less developed countries are as influential as the disadvantages. In this regard, the authorities of developing countries should devote more effort to developing this industry to bring more economic growth while striving to minimize the level of pollution.

(242 words)

极限运动 #101008

问法一： In your opinion, what are the advantages and disadvantages of extreme or adventure sports? #101008

范文 1

These days, there is an open debate on the pros and cons of adventure sports. Some may believe that such sports activity is dangerous, while others may claim that it has some beneficial effects. From my perspective, extreme sports have both positive and negative aspects, and I will explain my point of view from both sides in the following argument.

On the one hand, extreme sports are advantageous because they can boost the economic development of a country. To be specific, governments can take advantage of extreme sports as a featured element for their tourism industries to attract visitors, which may create a lot of work opportunities for local people. For example, in New Zealand, skydiving and bungee jumping are both popular activities, and it has 120 new positions to meet the needs of the increasing demand for participating in these adventure sports, which made a 15% increase in GDP in 2010.

On the other hand, those who argue against the notion claim that such sports may cause physical injury to human beings. Specifically, although many extreme sports are equipped with protective equipment and professional guidance when an emergency occurs, it is normally difficult for people to react instantly, which poses a crucial life threat. For instance, Paul Walker, who was a professional carracer, died in a racing accident in 2015, as the vehicle was totally out of control after the crash.

In conclusion, since participating in adventure sports can both drive economic development and may cause physical injury or even death, there are both advantages and disadvantages of extreme sports.

(262 words)

问法二：Nowadays, more and more people engage in dangerous activities, such as skiing, or white-water rafting. Are you in favor of them? Why? Use examples to support your opinion. #101008

范文 2

Recent years have witnessed a heated debate about the advantages and disadvantages of dangerous activities. Some people argue that there are many advantages involved in extreme sports, while opponents do not. As for me, I am in favor of dangerous sports, such as skiing and white-water rafting.

On the one hand, those extreme sports can enlarge individuals' social circles. To be more specific, adventure sports provide opportunities for people to meet others who share similar interests with them, which lays the foundation of friendship development. For example, I made more than twenty new friends when I participated skiing training camp last winter, and some of them remain my best friends.

On the other hand, dangerous sports can build up people's courage and willpower. To illustrate, when people take part in risky activities, they have to overcome fear and push themselves beyond their comfort zones. They can learn to stay calm under pressure and keep trying even when they face difficulties. To further support the above statement, I have read an article published by The Age that 73% of people who take part in water rafting can bravely deal with challenges from work and life.

In summary, I am keen on dangerous activities as they help me expand my social network and build up my mental strength.

(216 words)

大众传媒引发的信息革命 #101009

“The information revolution by modern mass communication has both positive and negative consequences for individuals and for society.” To what extent do you agree? Explain with your own experience. #101009

范文

Nowadays, the information revolution led by modern mass media has become a prevalent topic for debate. Some people point out that they have positive consequences for both individuals and society, while others indicate that they are harmful. Personally speaking, I agree that the information revolution led by modern mass media has both positive and negative effects on individuals and society.

On the one hand, the information revolution led by mass communication can help individuals and society prevent crises caused by natural disasters. To illustrate, since there are numerous coverage and predictions about natural disasters on TV and the internet, the entire society will be informed and in turn protect themselves and public property timely manner. For example, when I was living in Japan, a country with a high frequency of earthquakes, I found that every TV station was broadcasting earthquake predictions hourly. As a result, my friends and I could protect ourselves promptly when an earthquake came.

On the other hand, the information revolution brought by modern mass media could mislead individuals and society about prescription medications. In other words, since the drug industries spent a large amount of money on advertisements with a misleading tone and inaccurate information, consumers are more likely to be persuaded to purchase prescription medicines that they do not need. For instance, a drug company promoted a kind of diet pill and claimed that any consumer who took it would lose weight by 40 kilograms in a week. However, both my friend and I still kept the same weight and did not get rid of obesity after purchasing and using this drug.

To sum up, the information revolution generated by modern mass communication has not only a positive impact but also a negative effect on individuals and society.

(293 words)

大众传媒影响观点与个性 #101010

The mass media, including TV, radio, and newspapers, influences our society and shapes our opinions and characters. What is your opinion?
#101010

范文 1

There is no doubt that the functions of mass media have attracted numerous debates. While some people believe that such tools have a great influence on our life, others disagree. Personally speaking, I strongly believe that the mass media, including TV, radio, and newspapers, influences our society and shapes our perspectives and characters.

First and foremost, the mass media makes society connect more closely because the media delivers the latest information to everyone in society every day. In this case, people can overcome geographical and time constraints to discuss topics they are interested in. To further support the above statement, I can get the latest news through some social websites every day, and exchange my opinion with others through comments.

On the other hand, the mass media also has a negative influence on shaping our opinions and characters because it can sometimes spread false information and mislead people. To illustrate, unverified news can be released by TV and newspapers due to the lack of regulation, which can impact people who may be easily swayed by the wrong opinion. This can be established by a recent study by Oxford University, which stated that 79% of people agreed that fake news from mass media has a negative impact on shaping people's opinions and characters.

With all the points above, the conclusion can be drawn that the mass media influences our society because it brings people together as a community, and it also shapes our beliefs with the diverse information it offers.

(249 words)

The mass media, including TV, radio and newspapers, influences our society and shapes our opinions and characters. What is your opinion?

#101010

范文 2

Nowadays, the mass media plays a significant role in our daily life. Some people argue that the information revolution has reformed society and individuals, whereas others disagree. Personally speaking, I strongly believe that the mass media, including TV, radio, and newspapers, has a significant influence on our society and individuals' opinions and characters.

First and foremost, the mass media, including TV, radio, and newspapers, improves people's ability to think critically. To be more specific, the mass media provides a wide variety of opinions on hot topics, which makes people think in-depth when there are conflicting arguments. This can be established by a recent study by Oxford University, which stated that 78% of people think more critically in the mass media environment.

In addition, the second reason is that mass media may cause social riots, which is reasonable because some social media platforms provide violent information and bloody videos, so some people who lack judgment may be influenced and start to imitate these negative behaviors to cause chaos in the community. To further support the above statement, I have read a recent study by Oxford University, stating that 89% of people believe that social media can increase the number of violent cases in society.

With all the points above, the conclusion can be drawn that the mass media influences us in various ways, as it strengthens our critical thinking ability and may even trigger social protests.

(235 words)

大众传媒对年轻人的影响 #101011

Mass media, including TV and newspapers, have a great influence on humans, particularly on the younger generation. It has a pivotal role in shaping people's opinions. Discuss the extent you agree or disagree. Use your own experience or examples. #101011

范文

There is no doubt that TV and newspapers have affected individuals throughout the ages. Some people believe that there is a great influence caused by the mass media, while others disagree. Personally speaking, the mass media have a great influence on humans in shaping people's opinions, particularly on the younger generation.

The first and foremost reason for my belief is that the mass media can broaden people's horizons, which helps people embrace more opinions. To be more specific, since the mass media provides a platform for users to share their feelings, the readers are able to hear more voices and comments from different perspectives, which leads to the inadvertent accumulation of opinions. To further support the above statement, according to a survey by Oxford University, 85% of the opinions of the survey volunteers are influenced by the mass media.

On the other hand, the second reason for the argument is that critical thinking skills can be trained and improved through the connection with the mass media. To be more specific, since different media companies tend to transfer information with different attitudes and arguments, the readers or audiences will analyze the news rationally and critically, in which critical thinking skills will be gradually enhanced. To further support the above statement, according to a survey by Cambridge University, 95% of people agree with the idea that the mass media can help people shape their critical thinking ability.

With all the points above, the conclusion can be made that people's views can be significantly influenced by the emergence of mass media, as such information sources can give people more perspectives and help people develop critical thinking.

(273 words)

气候变化谁负责 #101012

Climate change is a concerning global issue. Who should take the responsibilities: governments, big companies, or individuals? #101012

范文 1

There is no doubt that climate change is a concerning global issue. Some people point out that governments should take responsibility, whereas others believe that big companies and individuals also have responsibilities. Personally speaking, I strongly believe that governments should take the major responsibilities for climate change, which can be supported by the following reasons.

The first and the most important reason for my belief is that governments have more power to make changes, which is obvious because governments have the legislative power to set relevant rules and regulations, minimize the origin that causes climate change, and constrain improper actions. To further support the above statement, research from Tsinghua University stated that the Chinese government set a rule to prohibit coal combustion and use greener energy instead, which effectively reduces carbon emissions by 20%.

On the other hand, the second reason for this argument is that governments have sufficient funds to make all the plans a reality, which is reasonable because it is a necessary support to formulate a relevant rule, cultivate relevant talents, plan for marketing, and campaign for citizens to know more about climate change. This can be established by a recent study of the Australian government that governmental investment to raise public awareness is the most effective way to mitigate climate change.

With all the points above, the conclusion can be made that governments play a major role in solving the climate change issue because it has more power and sufficient funds.

(245 words)

Climate change is a concerning global issue. Who should take the responsibilities: governments, big companies, or individuals? #101012

范文 2

Obviously, it is undoubtedly the case that climate change plays a vital role in our society and the statement that governments have attracted much attention from the public. As far as I am concerned, I believe that governments should take responsibility for climate change.

First and foremost, the most important reason is that legislative enforcement by governments can potentially ensure citizens' compliance with climate regulations. To be specific, regulatory control can impose penalties for violations, which will consequently result in public adherence. For instance, according to the annual report of Cambridge University, at least 80% of people have experienced a 30% increase in public compliance with carbon emission policies because of stricter regulations.

On the other hand, another significant reason is that governments' adequate funding can possibly boost national capacity for climate action. To illustrate, sufficient funding in green projects can give rise to the advancement of new eco-friendly technologies, thereby leading to more effective management of greenhouse gas emissions. To take a recent study from Zhejiang University as an example, more than 60% of people have experienced a decrease in emission of harmful gases as a result of governments' investment in development.

In conclusion, I deem that only governments can take responsibility and efficiently mitigate climate change. As more and more people are focusing on climate change, I do hope that essays can provide them with some insights.

电视帮助放松、排解孤独 #101013

Television serves many useful functions. It helps people to relax. Besides, it can also be seen as a companion for the lonely. To what extent do you agree with this? Explain why with your own experience. #101013

范文

There is no doubt that television has become an essential part of life. Personally speaking, I strongly believe that television does serve many useful functions, including as a way to relax as well as to accompany people in daily life, which can be supported by the following reasons.

The first and most important reason for my belief is that television plays an important role in helping people release stress after a long day, allowing people to temporarily forget their worries. By immersing themselves in light-hearted shows, comedy series, or travel programs, viewers can shift their focus away from real-life trouble and enjoy a moment of peace. For example, after a tiring day at work, I often watch a 30-minute comedy episode, which always lifts my mood and makes me feel much more relaxed..

On the other hand, the second reason for this argument is that television is an important entertainment tool that accompanies people every day to reduce loneliness, which is reasonable because it has a lot of interesting programs to cater to different age groups. This can be proved by my own experience that my family and I all choose television as our indispensable entertainment way every day.

With all the points above, the conclusion can be made that televisions can serve as a way to relax as well as a companion because they relieve stress and bring entertainment.

日用消费品的营销应该重品牌还是重优惠 #101015

Should marketing in companies producing consumer goods like food and clothing, place emphasis on the reputation of the company or short-term strategies like discounts and special offers? Why? #101015

范文 1

There is no doubt that the marketing in consumer goods companies has various channels. Some people point out that marketing for consumer goods should pay more attention to their reputation, whereas others disagree. Personally speaking, I strongly believe that marketing for consumer goods companies should lay more emphasis on their reputation, which can be supported by the reasons as follows.

First and foremost, one reason for my belief is that companies focusing on reputation strategies can enhance customer loyalty, which is obvious because companies' guarantee on the premium quality of durable products and the consistency of their excellent service provision improve customers' satisfaction and thus retain more customers. To further support the above statement, I have found a survey made by Monash University that there is a 73% increase in the customer retention rate of companies that focus on reputation strategies.

Secondly, the companies that aim to focus on their reputation will benefit from improving their market share. To illustrate, when a company strives to get a good reputation, it will invest funds to make a word-of-mouth marketing for its products, so it will win a large share of the market against its competitors. There is another study by the University of Sydney, which claims that over 56% of the companies that focus on their reputation have a larger marketing share than the others in the same industry.

With all the points above, the conclusion can be made that marketing for consumer goods companies should lay more emphasis on their reputation strategies because it can enhance customer loyalty and improve market share.

(262 words)

Should marketing in companies producing consumer goods like food and clothing, place emphasis on the reputation of the company or short-term strategies like discounts and special offers? Why? #101015

范文 2

Whether marketing strategies should concentrate on reputation or discounts has sparked a heated debate. Personally speaking, marketing for consumer goods companies, like clothing and food, should focus on short-term strategies like discounts and special offers, which can be supported as follows.

First and foremost, short-term marketing strategies can help the company increase its market share. To be more specific, strategies, such as discounts and special offers, are capable of attracting more potential customers from the market to purchase the products. Therefore, the company's market share will grow thanks to the increase in the customer base. For example, a study carried out by the University of Melbourne claims that, benefiting from their short-term marketing strategies, up to 85% of consumer goods companies' market share increases.

Secondly, short-term marketing strategies can help the company improve customer satisfaction. To be more explicit, more sales activities and special offers provide customers with more affordable prices but of the same quality, which helps improve satisfaction among their customers and build up consumer loyalty to this brand. News at China Daily shows that over 70% of consumer goods companies believe that short-term marketing strategies are beneficial to improving their customer satisfaction.

In conclusion, companies in the consumer goods sector should develop short-term marketing strategies because such strategies can help the company gain market share and secure consumer satisfaction.

研究气候变化的某方面 #101016

You are given climate change as the field of study. Which area would you prefer? Explain why you pick this particular area of your study and give an example in the area you pick. #101016

范文 1

There is no doubt that climate change has become an increasingly important issue in today's world. Personally speaking, I firmly believe that global warming should be a main study area in climate change, which will be supported by the following discussion.

First and foremost, the most important reason is that studying global warming can reduce detrimental effects on the ecological environment. To be more specific, people can monitor rising temperatures and sea-level changes through such research, so environmental damage can be prevented more effectively. For instance, according to a recent report from Oxford University, 78% of environmental risks in coastal regions were detected earlier with the help of continuous research on global warming.

On the other hand, another significant reason is that studying global warming can help maintain biodiversity. To illustrate, researchers can predict extreme temperatures and unusual climate changes through this area of study, so threats to animals and rare species can be mitigated in advance. For example, according to a recent report from Cambridge University, 64% of wildlife protection programs became more effective when global warming data was used to forecast abnormal temperature changes.

With all the points above, the conclusion can be made that global warming should be my main study area in climate change, because it can reduce ecological damage and help maintain biodiversity.

维护过去的建筑 #101023

It is important to preserve the beautiful buildings of the past, even if it will be expensive to do so. To what extent do you agree or disagree with it? Please support your opinion with advantages or disadvantages.
#101023

范文

Recently, the preservation of historical buildings has become a prevalent topic for debate. Some people point out that it is necessary to conserve these masterpieces of the past, while others indicate that it is not worthy due to the expensive maintenance fee. Personally speaking, I agree that it is not important to preserve the gorgeous buildings of the past because of many disadvantages.

First of all, preserving ancient architecture requires vast sums of capital. To illustrate, to maintain these smashing buildings, governments need to afford not only expensive equipment but also sophisticated experts. According to research from the Australian government, more than 20% of the nation's annual budget is allocated to the protection of historical buildings and churches.

Apart from that, conserving the old buildings is detrimental to urban planning administration. To be more specific, since some buildings are located at the pivot of urban transportation routes, urban planning in this area will be hindered. A study from Oxford University showed that more than 80% of cities have faced restrictions on preserving valuable historic buildings.

In conclusion, preserving ancient architecture not only requires a large amount of capital but also hinders urban development. Therefore, it is not worth preserving the beautiful buildings of the past.

(205 words)

大型购物广场取代小商铺 #101030

In many towns and cities, large shopping malls are replacing small local shops. Do you think this is a positive development? Give your reasons and examples. #101030

范文 1

It seems that large shopping complexes are gradually replacing small shops. Personally speaking, I strongly agree that this is a good change because it brings many benefits to society.

On the one hand, large shopping malls can provide customers with merchandise at more affordable prices. To be more specific, as many different shops are selling similar products in the same large shopping mall, these stores have to compete with each other and offer a lower profit margin on merchandise, which leads to lower prices for consumers. For example, research conducted by Harvard University indicates that prices of the same goods in shopping malls are 15% lower than those in small shops on average.

On the other hand, shopping in large commercial establishments may save a lot of time for customers who need to purchase multiple kinds of products. To be more specific, since there are nearly all varieties of stores in the shopping mall, shoppers are able to complete almost all errands in the same location instead of spending too much time traveling among different small shops. For instance, according to a study conducted by Stanford University, it saves customers up to 1.3 hours to purchase in large shopping malls, compared to buying the same goods in small shops.

In conclusion, it is a good chance that large shopping malls are replacing small shops because large shopping malls can offer consumers more affordable prices and help consumers save a lot of time.

(242 words)

In many towns and cities, large shopping malls are replacing small local shops. Do you think this is a positive development? Give your reasons and examples. #101030

范文 2

There is no doubt that large shopping malls are replacing some small shops. Personally speaking, I strongly believe it is a good change, which can be explained by the following reasons.

First and foremost, large shopping malls replacing small stores can improve customers' shopping efficiency. To be more specific, in large shopping centers, all kinds of products and services are integrated into one place, so customers do not need to spend time traveling between different shops to complete their shopping lists. For example, I have read a recent study by Oxford University, stating that 80% of people believe that the large shopping center can save shopping time.

Moreover, large shopping plazas replacing small shops can provide lower prices to customers. To be more explicit, as large shopping malls replace small shops, vendors face high commercial competition to attract more consumers, so the product price will be set to be more affordable to outperform other contenders. For instance, a study conducted by Cambridge University demonstrates that the price in big supermarkets is 15% cheaper than that in small stalls.

With all the points above, the conclusion can be made that large shopping malls replacing small shops is a good change because it can improve shopping efficiency and provide a lower price to customers.

数码时代的优点缺点 #101032

Some people claim that the digital age has made us lazier, while others claim it has made us more knowledgeable. Discuss both opinions, use your own experience to support. #101032

范文

There is no doubt that people's life has been changed a lot due to the impact of digital devices. Some people argue that the digital age has made us lazier, whereas others state it has made us more knowledgeable. I strongly support both stances, which can be supported by the reasons as follows.

The reason that the digital age has made people lazier is that it eliminates the motivation to go outdoors. This is because the software allows people to perform activities via online platforms instead of physically going outdoors, such as food delivery and online banking. As a result, people rely increasingly on these digital devices and hence become lazier. This can be established by my own experience where I became reluctant to go outdoors after I started ordering food on digital devices.

On the other hand, the reason that the digital age has made us more knowledgeable is that it helps people acquire information more effectively because searching for information has become easier. Specifically, online searching tools, like Google, accurately help individuals locate materials in an extremely short time without going to a library. For example, the average time I spent on searching for desired knowledge with the use of digital searching platforms has decreased by 80%, which facilitates me to expand my knowledge base.

With all the points above, the conclusion can be drawn that the digital age has made us lazier because it eliminates people's motivation to go outdoors, while it has made us knowledgeable since it helps people to acquire knowledge more effectively.

网上信息是否应该付费 #101033

Online materials like music, movies, xxx are accessible at no cost. Do you think online material should be accessed at no cost? Support. #101033

范文

There is a heated debate about whether people should pay for online materials, like music and movies. Personally speaking, online materials should be accessed at a cost, which can be supported as follows.

The most important reason is that paying for online materials enriches the variety of online production. To illustrate, paying for online content motivates producers to create more works because they can earn money and make a living from their production. Therefore, more people from different fields are willing to put more time and effort into posting meaningful content online to attract viewers, which promotes the diversity of online content. This can be established by a recent study by Oxford University that the types of music increased from 1000 to 2500 after charging one dollar for each online song in America, varying from jazz to pop music.

On the other hand, paying for online content protects creators' intellectual property. Specifically, charging money for online works prohibits illegal uses, as people are intimidated by being fined or jailed. Consequently, such a requirement raises people's awareness to respect creators' rights, which in turn protects owners' exclusive rights to their works. For example, last year, I found a beautiful photo on the internet and reposted it on my blog, but I did not realize that I had violated the photographer's copyright. Five days later, I faced the penalties of 500 dollars for this infringed work. Since then, I would never use others' work without their permission.

In conclusion, online materials should be accessed at a cost because they can enrich the diversity of online content and also protect producers' copyrights.

青少年需不需要上理财课程 #101034

Teenagers should receive lessons on principles of personal finance, such as investing and debt. To what extent do you agree with this statement?
#101034

范文

There is no doubt that various categories of courses are provided in school. Some people argue that schools should teach teenagers lessons on knowledge of private finance, such as investing and debt, whereas others disagree. I strongly believe that teenagers should receive lessons on principles of personal finance, which can be supported by the reasons as follows.

The first reason is that teaching teenagers lessons on principles of personal finance can prevent them from committing financial crimes. This is because finance classes are beneficial in cultivating teenagers' awareness of financial traps, and hence educate them to avoid financially related fraud. This can be supported by my own experience that I have avoided some financial traps owing to the knowledge I acquired in the financial classes in high school.

On the other hand, the second reason is that classes on personal finance help students make wise financial decisions. Specifically, finance classes can guide teenagers to allocate their funds more efficiently during investment, so they can generate extra income besides their salary. This can be supported by a recent report conducted by Oxford University that high school students who have received lessons on personal finance can gain 60% more money owing to their wise decisions on investments than their colleagues who have not such experience.

With all the points above, the conclusion can be drawn that teenagers should receive lessons on principles of personal finance because such classes help to prevent them from financial crimes and make wise finance-related decisions.

学生应该学习，而不是考试 #101036

Some people claim that instead of having to prepare for huge numbers of exams in school, children should learn more. To what extent do you agree with this statement? Use your own experience to support your ideas.
#101036

范文

It is a heated debate between school exams and children's learning. Some people point out that children should prepare for many exams in school rather than learn more, whereas others hold different opinions. Personally speaking, I strongly believe that children should learn more.

The first and most important reason is that studying more can broaden children's knowledge range. To be more specific, learning more enables them to acquire knowledge from various fields such as history, geography, and literature. To further support this point, I read many books to learn about history, and after one year, I became more familiar with the history of China than any other classmates.

On the other hand, children should learn more because it is beneficial for their future careers. To illustrate, learning practical skills, such as communication skills rather than only preparing for exams in school, can be more helpful for students' future development in their careers. For example, after learning more about practical skills, I can communicate efficiently with my boss in an accounting firm, which helps me get promoted three months after I started my career.

With all the points above, a conclusion can be made that children should learn more instead of having to prepare for a lot of school exams because school exams fail to measure children's soft skills, and learning more is beneficial for children's future careers.

无现金社会的优缺点 #101038

There are more and more situations where credit cards are used instead of cash. The idea of a cashless society seems to be becoming more of a reality. How realistic do you think it is? What do you see as the potential benefits or problems? #101038

范文 1

There is a heated debate that a cashless society is becoming a reality because an increasing number of people are using credit cards instead of using cash. Personally speaking, I strongly believe that a cashless society has already come into reality, and it will cause some potential problems.

First and foremost, a cashless society has become a reality because of the rapid development of digital payment. To be more specific, people are more willing to use mobile phones and credit cards to purchase goods or pay for bills rather than carry lots of cash in their pockets. To further support this statement, one example is that I always use my credit card to buy food from supermarkets or transfer money to my friends through internet banking nowadays, which shows that a cashless society has already become a reality.

On the other hand, one problem brought by a cashless society is that it may increase the rate of cybercrimes to some extent. To illustrate, more people choose to use credit cards for payment, especially when shopping online, which raises the concern of personal information security because anyone can get access to others' bank accounts if the person knows the owners' personal information, such as card numbers and security codes. My aunt has such an experience to support this argument, whose credit card information was given out, resulting in a loss of \$1000 in her account due to cybercrime.

In conclusion, as more and more people are using credit cards for payment, it is very likely that the cashless society will eventually become a reality, but it may increase the occurrence of certain problems, like cybercrimes.

(274 words)

There are more and more situations where credit cards are used instead of cash. The idea of a cashless society seems to be becoming more of a reality. How realistic do you think it is? What do you see as the potential benefits or problems? #101038

范文 2

Nowadays, since more and more people are using credit cards in their daily transactions, whether a cashless society can become a reality has drawn heated controversy. From my perspective, it is not realistic, and there are some problems with a cashless society.

First and foremost, there are numerous reasons to explain why a cashless society is not realistic, but the most conspicuous one stems from the fact that cashless payment methods cannot work when there is a power failure, which is reasonable because people have to use POS machines in order to pay by credit cards. However, all POS machines are dependent on electricity, and without electric power, these machines cannot work. For example, last weekend, there was a power failure near my home, so people could not use credit cards to pay their bills.

One compelling negative consequence of a cashless society is the increasing rate of cybercrimes. To elaborate, in a cashless society, money is transferred from one account to another through the Internet, which means hackers can attack the account and steal people's money via the Internet during a transaction. For instance, recent research from the University of Melbourne illustrates that the rate of cybercrimes has increased by 20% since people began to use cards for payment.

In conclusion, a cashless society is not realistic because cashless payment methods cannot work without a power supply, and one detrimental effect of a cashless society is the increasing rate of cybercrimes.

(242 words)

先进技术延长人们寿命是好是坏 #101039

Advanced technology is responsible for increasing the average life expectancy. Do you think it is a curse or a blessing? #101039

范文 1

There is no doubt that the debate over whether advanced technology is responsible for increasing average life expectancy has attracted public attention in the modern world. From a personal perspective, I firmly believe that the increase in life expectancy brought by cutting-edge technology is a blessing, as discussed below.

First and foremost, the most important reason is that longer life expectancy enabled by advanced technology can improve the quality of life. To be more specific, a longer life allows people to spend more time with their families and leave more valuable memories for their loved ones, so it gives individuals a better chance to enjoy life. For example, according to an annual report by the World Health Organization, at least 80% of elderly people and their relatives report higher life enjoyment because of longer life expectancy.

Moreover, another benefit of longer life expectancy realized by medical technology is that it allows people to contribute more to society. To be more specific, increased life expectancy can offer longer working years, and many experienced workers are able to remain active in the workforce and share their knowledge and skills. For instance, a recent study published by Oxford University found a strong correlation between longer working lives due to technology and higher economic productivity.

In conclusion, the increase in life expectancy driven by medical technology is a blessing. It not only improves individuals' quality of life but also allows people to contribute to society for a longer period of time. Therefore, medical technology plays a vital role in both personal well-being and social development.

(261 words)

Advanced technology is responsible for increasing the average life expectancy. Do you think it is a curse or a blessing? #101039

范文 2

There is no doubt that advanced technology has expanded the human lifespan. Some people argue that this phenomenon results in negative effects on society, whereas others state that it brings benefits. I strongly believe that the expansion of the human lifespan caused by advanced technology is a curse, which can be supported by the reasons as follows.

The first reason is that the extension of human lifespan owing to technology exacerbates the shortage of resource supply. Specifically, since advanced technology expands human life, the global population will increase dramatically, so more resources are needed to supply the expanding global population. This can be supported by my own experience that the food supply in my home country has fallen by 20% due to the impact of the expansion of its residents' lifespan.

On the other hand, the second reason is that prolonging a human's lifespan caused by the advancement of technology increases the government's financial burden. This is because governments need to spend more money on pension welfare to support the living of the elderly as they live longer. This can be supported by a recent study conducted by Oxford University that the British government's budget on pensions has increased significantly by 80% as the average lifespan of British residents has risen by 2 years.

With all the points above, the conclusion can be drawn that the extension of the human lifespan enabled by advanced technology is a curse because it exacerbates the shortage of resources and increases the government's financial burden.

(251 words)

体验式学习在学校有无好处 #101040

Some people point that experiential learning (i.e. learning by doing) can work well in formal education. However, others think a traditional form of teaching is the best. Do you think experiential learning is beneficial in high school or college? #101040

范文 1

There is no doubt that experiential learning is becoming increasingly popular in schools. Some people state that experiential learning can work well in formal education, whereas others argue that a traditional form of teaching is the best. I strongly believe that experiential learning is beneficial in high schools and colleges, which can be supported by the following reasons.

The first reason is that experiential learning helps students acquire and memorize knowledge because students can understand concepts by conducting experiments. Specifically, conducting hands-on experiments and watching the real process of experiments by themselves enhances students' memory and interpretation of the knowledge. This can be supported by my own experience where I could memorize knowledge by doing experiments more profoundly compared with just learning theories in books.

On the other hand, experiential learning is helpful for students to develop practical skills. Explicitly, with the opportunity to apply concepts in textbooks in real cases, practical experience can be learned and built on to cultivate pragmatic techniques, such as interpersonal skills. This can be supported by a recent study conducted by Oxford University that 90% of students who graduate from experiential learning programs show a better performance in practical skills compared with their peers.

With all the points above, the conclusion can be drawn that experiential learning is beneficial in high schools and colleges because it helps students to memorize knowledge and acquire practical skills.

(231 words)

Some people point that experiential learning (i.e. learning by doing) can work well in formal education. However, others think a traditional form of teaching is the best. Do you think experiential learning is beneficial in high school or college? #101040

范文 2

There is a heated debate about experiential learning and formal education. Some people argue that experiential learning is beneficial, whereas others disagree. Personally speaking, experiential learning can work effectively in high school or college, which can be supported as follows.

The most important reason is that learning by doing helps people gain more hands-on experience to acquire practical methods, which can be applied in formal education. Such approaches learned from real cases offer more referential value for students so that they can use these techniques to study. Specifically, these methodologies can be obtained from projects, site visits, and school-provided internships. For example, I learned how to construct proposals to present my research and analysis during my school internships by interacting with industry personnel and gained practical skills to help to learn.

On the other hand, experiential learning helps people improve their communication skills. To elaborate, learning by doing provides people with opportunities to socialize during school and express their ideas with others, such as doing a group project. Therefore, people can find out their weaknesses during interpersonal interaction and hence improve themselves after reflecting on their performance. For example, during the group assignment, I found I was not good at communicating with others, as I was so nervous to express my ideas. To overcome my weakness, I developed initiatives to encourage myself to talk to others and build my confidence.

In conclusion, experiential learning can work well in formal education because it can help people gain more practical skills and enhance communication techniques. In this regard, experiential learning can be incorporated into formal education.

(264 words)

理科比文科更重要 #101041

Some people argue that science is more important than the arts. What is your opinion? #101041

范文

There is a controversy about whether science is more important than art. Some people argue that science is more valuable, whereas others disagree. Personally speaking, science is as important as art because they both bring benefits to society, which can be supported as follows.

Firstly, learning science enhances people's logical thinking. To be more specific, science courses, such as mathematics and biology, are the study of the rules in nature, which is based on a strict logical structure, so studying science helps people think logically and explore the laws of the unknown in society. For example, I learned that we should first find the root causes of the problem and then reason solutions logically in order to get strong evidence of unknowns when doing experiments after I studied mathematics at the university last year.

On the other hand, art stimulates people's creativity and produces more works for society. To elaborate, arts, such as painting and music, spark people's curiosity and imagination because people develop their aesthetic appreciation and inspiration when drawing or imagining a scene in their mind or when listening to a piece of music. Such activities foster innovative thinking and encourage the creation of artworks, enriching society and culture. For instance, I gained a creative idea when I listened to a song called 'Burning' last year, and I wrote a fiction based on the lyrics of this song and posted it online.

In conclusion, science and art are equally important for society because people can learn logical thinking from science and also enhance creativity and produce artworks by studying the arts.

(263 words)

家长需要为孩子的行为负法律责任吗 #101042

Should parents be held legally responsible for the actions of their children? Do you agree with this opinion? Support your position with your own study, experience or observations. #101042

范文 1

There is no doubt that the topic of whether parents should be legally responsible for their children's behaviour has drawn public attention these days. From my perspective, parents should take legal responsibility for what their children have done.

Firstly, imposing the legal responsibilities on parents is reasonable because parents' behaviour affects how their children behave. To be more specific, having not been fully socialised or educated yet, children learn about social norms and moral standards from their parents both consciously and unconsciously. Therefore, children's behaviour, including improper or even illegal actions, is an imitation of their parents' habits and values. Indeed, according to recent research done by Oxford University, over 80% of the child participants' actions resembled those of their parents. Taking accountability for their children's behaviour is the same as being responsible for parents' own behaviour.

On the other hand, holding parents' accountable helps to reduce juvenile delinquency. To illustrate, knowing that they will receive punishments as well, parents are more likely to regulate their children's behaviour and take early intervention for any action that may lead to legally unacceptable consequences. In this way, juvenile crime rates will decrease. To support this view, a study done by researchers at Harvard University concludes that in areas where parents have accountability for their children's behaviour, crime rates for children under 18 are 50% lower than in other areas in the study.

With all the points above, I firmly believe that holding parents legally responsible for their children's actions is necessary if we want young people to receive better guidance.

(258 words)

Should parents be held legally responsible for the actions of their children? Do you agree with this opinion? Support your position with your own study, experience or observations. #101042

范文 2

There is no doubt that the debate over whether parents should be held legally responsible for their children's actions has drawn attention from the general public in the modern world. Personally speaking, I strongly believe that parents should bear legal responsibility for their children's behaviour, which will be supported by the following reasons.

First and foremost, parents have a direct and profound influence on their children's behavioural development. To be more specific, parents serve as primary role models for their children, which consequently results in children imitating their parents' actions and values. For instance, according to the annual report of the American Psychological Association, at least 80% of adolescents have experienced behavioral changes because of parental guidance and family environment.

On the other hand, in terms of legal consequences, another significant reason is that holding parents legally responsible can strengthen their sense of supervision and prevention. To illustrate, the threat of legal penalties can give rise to more proactive parental monitoring, thereby leading to a reduction in juvenile misconduct. To take a recent study from Stanford University as an example, more than 60% of juvenile delinquency cases declined as a result of stricter parental accountability laws.

With all the points above, it can be concluded that parents should indeed be held legally responsible for their children's actions, because parental influence and legal deterrence both play a vital role in this case. Therefore, it is of utmost importance that legislators and families should devote effort and resources to this situation.

学校扣迟交作业学生的分数 #101043

**Some universities deduct students' marks if assignments are given late.
What is your opinion and give your recommendations? #101043**

范文 1

There is no doubt that some universities deduct students' work if their assignment is given late. Some people state that this rule is beneficial to students' study, whereas others disagree. I strongly believe that deducting students' work if the assignment is given late has a positive effect on their studies.

The reason why deducting students' work if their assignment is overdue is beneficial to students is that it helps to improve students' time management. Specifically, students are forced to be punctual in order to avoid punishment, so students start to develop an awareness of time and punctuality. For example, I have enhanced my time management skills during my university time when I tried to avoid my school's strict punishments on students' work in terms of late submissions.

As for the alternative action, universities should help students make a staged timetable for the progress of their assignments. This will be effective because a phased timetable can remind them how much time they will need to complete their work, thus avoiding missing deadlines. This can be supported by a recent report conducted by Oxford University that students who make a staged timetable for their work are 80% less likely to submit their assignments late compared to their classmates who do not.

With all the points above, the conclusion can be drawn that deducting students' work if an assignment is given late is beneficial to students because it improves students' time management. In addition, an alternative action to avoid submitting assignments late is to make a staged timetable.

(255 words)

**Some universities deduct students' marks if assignments are given late.
What is your opinion and give your recommendations#101043**

范文 2

There is no doubt that some universities deduct students' work if the assignment is given late. Some people point out that this policy is beneficial to students, whereas others disagree. Personally speaking, I strongly believe that deducting students' work if it is submitted after the deadline can bring positive effects on students.

The most important reason for the belief is that it can encourage students to improve their time management skills, which is obvious because students would develop an awareness of punctuality in order to avoid punishment. To further support my point, I have enhanced my time management skills during my university, so I won't be affected by the strict policy towards late submission.

On the other hand, some alternative actions are suggested on top of this policy. For example, universities can send out reminders to students who have deadlines coming up. This suggestion is reasonable, as some students might mess up updates when they are working on multiple assignments at the same time, which can be established by a recent study from Oxford University stating that 76% of students tend to submit their assignments on time with email reminders.

With all the points above, the conclusion can be made that mark deduction for late submission can bring benefits to students because it encourages students to practice their time management skills, and universities can send reminders to students to keep things organized.

兼顾工作和学习 #101044

In order to study effectively, it requires comfort, peace and time. So it is impossible for a student to combine learning and employment at the same time, because one distracts the other. Is it realistic to combine them at the same time in our life today? Support your opinion with examples. #101044

范文 1

There is no doubt that the study needs time, peace, and comfort, while employment needs the same thing. Some people state that it is impossible to combine those two because one distracts from the other, whereas others disagree. I strongly believe that combining study with employment is realistic in our life, which can be supported by the reasons as follows.

The first reason is that individuals can combine study with employment by making use of the time saved by using high-tech equipment. Specifically, employees' working efficiency has been significantly improved in recent years, which allows them to have more time to study after completing their jobs early. This can be supported by my own experience where I can study in the afternoon, even during working hours, because I can finish my work in the morning owing to high-tech tools.

On the other hand, the second reason why combining study with employment is realistic is that there are various online courses available that provide high flexibility for employees in terms of their arrangements. Consequently, employees can study at night or during weekends without distracting their jobs during working hours. This can be supported by a recent report conducted by Oxford University that 60% of British employees succeed in making a balance between study and employment by attending online courses at night.

With all the points above, the conclusion can be drawn that combining study with employment is realistic because students can conduct jobs during their holidays and employees can study through online courses.

(252 words)

In order to study effectively, it requires comfort, peace and time. So it is impossible for a student to combine learning and employment at the same time, because one distracts the other. Is it realistic to combine them at the same time in our life today? Support your opinion with examples. #101044

范文 2

The topic of whether students can study and work at the same time has sparked heated debate. Some people argue that it is possible to combine both, while others disagree. Personally speaking, it is impossible for a student to combine learning and employment at the same time, which can be supported as follows.

First and foremost, it is argued that students have limited time and energy, so it is unrealistic to achieve learning and employment at the same time. To be more specific, students have to spend a large amount of time and make great efforts in their studies nowadays, which means they leave little time and energy for employment. This can be supported by a recent study of Oxford University, which stated that more than 82% of students in universities expressed that they don't have enough time and energy to combine learning and working simultaneously.

Moreover, students may have high mental pressure if they combine studying and working at the same time. Indeed, students already have to face fierce competition in schools, and they have to try to fit in more regulations in the workplace, so they may acquire a mental burden in this process. This can be established by my own experience where I faced high pressure and always felt depressed when I got a part-time job in an accounting firm in the second year of university.

With all points above, the conclusion can be drawn that it is unrealistic to combine both work and study because of students' limited time and the risk of mental stress. In this regard, students may have to choose between learning and employment.

音乐帮助学习吗 #101047

Some people indicate that certain kinds of music can promote learning for young children, while research showed that results are mixed. What is your opinion? Use your own experience and observation. #101047

范文 1

There is no doubt that there are different tools that can assist children with their studies. Some people argue that a certain kind of music can promote learning for young children, whereas others have shown that results are mixed. I strongly believe that certain kinds of music help young children study, which can be supported as follows.

The first reason is that soft music helps young children concentrate on studying. Specifically, the lyric rhythm in soft music is beneficial to pacifying children even in a noisy environment, so they can study more concentrated in a calm mood. For example, listening to soft music could help me concentrate on my homework even though there were some noises from the construction field when I was a young child.

On the other hand, the second reason is that a certain kind of music is helpful for children to study history, such as blues music. Explicitly, children can learn the history of African people in the lyrics of blues music, which were written by African musicians to describe their daily lives and cultures. This can be established by a recent report I read, which was conducted by Oxford University, and it states that 80% of primary schools in America teach their students blues music to help them interpret history.

With all the points above, the conclusion can be drawn that certain types of music can promote learning for young children, as soft music helps them to concentrate on studying, while blues music helps in terms of learning about history.

(255 words)

Some people indicate that certain kinds of music can promote learning for young children, while research showed that results are mixed. What is your opinion? Use your own experience and observation. #101047

范文 2

There is no doubt that the effects of a certain kind of music on young children's learning are mixed. Personally speaking, I strongly believe that certain types of music can promote learning for young children, which can be supported by the reasons as follows.

The first and most important reason for my belief is that blues music can improve students' ability to study literature, which is obvious because the words of the blues music are literary, so students can learn these words from the blues music. In this way, their ability to study literature can be improved. To further support the above statement, my recent study shows that 80% of students who listen to blues music have a better ability to study literature.

On the other hand, the second reason for this argument is that classical music can help students focus on learning, which is obvious because classical music is gentle. Hence, listening to classical music can help students stabilize their emotions, and in this case, they can focus on their studies. For example, I paid more attention to learning when I listened to classical music while I was young.

With all the points above, the conclusion can be made that certain kinds of music can promote learning for young children because blues music can improve students' ability to study literature, and classical music can help students focus on learning.

(230 words)

健康饮食比锻炼更重要？ #101050

A healthy diet is more important for keeping fit than exercise. To what extent do you agree with this statement? Give examples or personal experiences. #101050

范文 1

There is no doubt that many people try to keep fit by doing exercise. Some people argue that a healthy diet is indispensable for keeping fit, whereas others state that doing exercise is more important. I strongly believe that a healthy diet plays a more effective role in keeping fit, which can be supported by the reasons as follows.

The foremost reason is that a healthy diet provides individuals with a comprehensive dietary structure. Specifically, a healthy food structure ensures that sufficient nutritional components are absorbed by individuals and consequently helps them keep fit. This can be supported by my own experience that the number of times I catch a cold has decreased by 80% after I improved my diet last year.

On the other hand, the second reason is that a healthy diet helps people limit the intake of fat, which is a risk factor for chronic diseases. Explicitly, a healthy diet serves to address the root cause of many diseases, such as liver and stomach diseases, by avoiding excessive intake of unhealthy substances. This can be supported by a recent report conducted by Oxford University that individuals who have a healthy diet are 80% less likely to suffer from chronic diseases than those who do not.

With all the points above, the conclusion can be drawn that a healthy diet is more effective for keeping fit because it provides a comprehensive dietary structure and limits the intake of fat.

(241 words)

A healthy diet is more important for keeping fit than exercise. To what extent do you agree with this statement? Give examples or personal experiences. #101050

范文 2

There is a controversy about the methods to stay fit. Some people argue that doing exercise is more important to stay slim, whereas others disagree. Personally speaking, doing exercise is more important for keeping fit than a healthy diet.

On one hand, exercises help to reduce stress and maintain mental health. To illustrate, physical activities can help distract people's minds from anxious thoughts because people are focusing on physical activities rather than thinking of stressful events when they are exercising. With the relief of mental stress and tension, people can maintain a healthy mental status and stay happy. For example, after I went to a yoga class, I felt relaxed because I concentrated on trying to get a yoga posture right when doing yoga instead of stressful things.

On the other hand, exercise boosts individuals' immune systems. To be more specific, doing exercise increases the number of antibodies and white blood cells that are critical components of the body's immune system that fight off diseases, which reduces the chance of getting a cold and protects people from infectious diseases. For example, I used to catch a cold every winter, but I never got the flu in winter ever since I started exercising regularly.

In conclusion, physical exercise is more crucial because doing exercise can help to manage stress and improve the immune system. In this regard, exercise should be advocated.

哪种学习资源最靠谱 #101052

Students can obtain information on academic subjects online, the printed books and articles, and discussion with their teachers and their peers. Which one is the most reliable source? #101052

范文 1

There is no doubt that students can obtain information on academic knowledge from different sources, such as online, printed books, or discussions with peers. I strongly believe that printed books are the most reliable source of academic knowledge, which can be supported by the reasons as follows.

The first reason is that printed books are professional because they are written by experts. Specifically, information from academic knowledge in printed books is accepted by the academic world, and only those with sufficient knowledge are able to write books. This can be supported by my own experience where I was asked to only take the information from the printed books as references when I wrote academic reports in food science, because printed books were written by authoritative experts in that field.

On the other hand, the second reason is that printed books have a lower level of error rate than other sources because they are carefully proofread before publishing. Consequently, printed books are the most reliable sources compared to others in terms of accuracy. This can be supported by a recent report conducted by Oxford University that the error rate for printed books is the lowest among all types of resources due to proofreading.

With all the points above, the conclusion can be drawn that printed books are the most reliable sources of academic information because they are professional and have a low level of error rate.

(235 words)

Students can obtain information on academic subjects online, the printed books and articles, and discussion with their teachers and their peers. Which one is the most reliable source? #101052

范文 2

There is a controversy about the sources of information. Some people believe that information online is the most reliable, while others disagree. Personally speaking, printed books and articles are considered the most reliable sources, which can be supported as follows.

On the one hand, there is no doubt that the published books are the most credible in terms of the depth of review. To illustrate, the contents in printed books must be strictly proofread multiple times and approved by publishers before publishing. As a result, the accountability of information in the books is verified, and any mistakes are also rectified, making sure that the information in published books is accurate. For example, I wrote a book in China, which was revised by other experts in the same field 20 times during the editing process, and I could not publish it until there were no mistakes.

On the other hand, the printed books are most reliable on the basis that the cited sources of such materials are credible. To be more specific, books that are published must have references and credible sources to back up their information, which are based on primary or secondary research resources from leading institutions, like NASA. For example, a report published by The Economist stated that 89% of published books had credible and factual sources from the official website and institutional sites.

In conclusion, the printed books are the most reliable sources for students to obtain information on academic subjects because of their review process and the credibility of cited sources. In this regard, students should use printed articles as materials for study.

(267 words)

广告的优点缺点 #101053

**Advertising may make people buy something they don't need or cannot afford, but also they can convey information to increase their life quality.
What is your opinion? #101053**

范文

There is a controversy about the function of advertising. Whether it is beneficial or not attracts public attention. Personally speaking, advertising makes people buy something they don't need or cannot afford, but it also increases people's life quality.

Firstly, an advertisement may get customers to buy unnecessary products or those they cannot afford. To illustrate, the advertisers may use advertising tricks to trigger customers' desire to purchase their products on impulse. Impulse buying occurs especially when customers are targeted by the advertisers. Consequently, the products bought may become redundant if the customers do not need them, or even the purchase may impose a financial burden on the customers if they cannot afford the high price. For example, with one at home, I still bought a juicer yesterday because the advertising said the store had special offers only on that day, which induced me to purchase the juicer, and the purchased juicer lies idle now.

On the other hand, advertising improves people's life quality by saving time and energy. To elaborate, advertisement gives customers opportunities to acquire comprehensive information about products without wasting time shopping around and asking sellers for information. Therefore, advertising improves people's life quality as customers can be well-informed easily. For example, it took me one day to buy a mobile phone without seeing any advertisement because I had to go to four shops to compare each function, but I can get timely information on TV after watching the advertisement and thus make a choice within one hour.

In conclusion, advertising has limitations because consumers purchase stuff they don't need, but it can increase life quality.

(268 words)

政府面临的最严重的问题是什么 #101055

The world's governments and organizations are facing a lot of issues. Which do you think is the most pressing problem for the inhabitants on our planet? And give solutions. #101055

范文 1

There is no doubt that the world's governments and organizations are facing many issues which become pressing problems for the inhabitants of our planet. In my opinion, the most pressing problem globally is climate change, and solutions to this problem will also be discussed.

The first and most important reason for my belief is that climate change will reduce biodiversity. It is obvious that global warming not only changed human living conditions but also destroyed animals' living environment. The statistics showed that in China, more than 100 species are endangered due to the rising temperature that damaged their living condition.

However, the main solution to climate change is to use clean energy, such as solar energy. The reason is that solar power is sustainable energy, which can reduce greenhouse gases as well as protect the Earth's natural resources. It is proven that after Melbourne started utilizing solar power in public transportation, carbon dioxide emissions were significantly reduced.

With all the points above, the conclusion can be made that climate change is the most serious problem in society that many governments are facing. However, to address the issue, we should encourage societies to use solar energy to replace fossil fuels to improve this situation.

(203 words)

The world's governments and organizations are facing a lot of issues. Which do you think is the most pressing problem for the inhabitants on our planet? And give solutions. #101055

范文 2

There is no doubt that the world's governments and organizations are facing a lot of issues. Personally speaking, the most pressing problem for the habitats on our planet is air pollution, and the most effective solution is to exploit new clean energy, which can be supported by the reason as follows.

The most important reason for my belief is that air pollution can seriously affect people's health, which is obvious because the dirty air we breathe every day can cause a lot of chronic diseases. These chronic diseases perplex the whole public and the nation. To further support the above statement, research in China showed that the risk of getting lung cancer in areas with heavy air pollution is 20% higher than in areas with good air quality.

To solve this issue, the most effective way is to develop clean energy, which is reasonable because the most prevailing energy source today is fossil fuels. The combustion of fossil fuels produces air pollution, such as carbon dioxide, nitrogen oxides, and sulfur dioxide. Therefore, if cleaner alternatives can be developed and utilized, the issue of air pollution can be addressed to a large degree. This can be established by a recent study that if fossil fuels can be replaced by cleaner energy sources, the air pollution index in countries with bad air quality will be 50% lower.

In conclusion, considering its damage to people's physical health, I reckon air pollution is the most urgent issue currently, and the most efficient solution is clean energy utilization to fulfill carbon discharges reduction.

(258 words)

学校是否应该按照学生能力分组教学？ #101057

Some people think schools should group students according to their academic abilities while others think students can achieve better performance in mixed groups. Discuss both opinions and give your own opinion. #101057

范文

There is a controversy regarding student grouping in school. Some people think that students should be grouped by academic abilities, while others disagree. Personally speaking, students can learn from each other in both mixed groups and groups that have students with similar academic abilities, which can be supported as follows.

On the one hand, there is no doubt that mixed-ability grouping can facilitate all students in the group to progress together. To illustrate, higher-ability students can develop a deeper understanding of knowledge by teaching others in the group, and meanwhile, lower-ability students benefit from the support of peer tutoring because students are able to explain concepts in a way that their peers can easily understand, which helps all students in mixed groups achieve better performance. For example, a study by Oxford University showed that the grades of each student increased by 10% after dividing students with different abilities into groups last year.

On the other hand, ability-based grouping enhances students' learning efficiency by synchronizing their learning speeds. To be more specific, students in their designated group can learn at their own speed because teachers tailor activities and assignments in accordance with students' level of ability so that fast learners are not held back, and slow students are not rushed. For example, I used to get bored waiting for other students' progress, but after I was assigned to the high-score group, our group could go forward based on our learning progress without waiting for the slower learners.

In conclusion, both mixed-ability groups and ability-based groupings can be adopted because a mixed-ability group can promote common progress within the group, and an ability-based group can allow students to learn at the same speed.

(281 words)

教育和医疗，哪一个更值得政府投入更多资金 #101059

As national services, which one deserves to receive more financial support, education, or health? #101059

范文

There is no doubt that many national services need financial support from governments. Some people argue that education deserves to receive more financial support, whereas others state that health should be the focus. I strongly believe that education deserves to receive more financial support, which can be justified by the reasons as follows.

The foremost reason is that investment in education makes education more accessible. To be more specific, investment in education helps to decrease university tuition fees, and thus, more people can attend higher-level education owing to the lowered financial barriers. This can be supported by my own experience where I was able to enter university after the Chinese government increased its budget on educational funding in 2010, which I could not afford previously.

On the other hand, the second reason is that investing more capital in education accelerates the country's technological progress. Specifically, investment in education is conducive to cultivating more scientific and technology-related talents, who are the key to promoting the advancement of technology. This can be established by a recent report conducted by Peking University that the international ranking of China's technology level has risen from the 10th to the 2nd place, thanks to the expanded investment in the country's tertiary education.

With all the points above, education deserves to receive more financial support because it makes education widely accessible and accelerates the country's technology development.

(230 words)

集中考试和不停考试哪个好 #101061

There are different assessment systems, putting all exams at the end of the term, or assignments and exams being spread out throughout the semester. What are the advantages and disadvantages of each system? Which system do you prefer? #101061

范文

There is no doubt that there are different assessment systems, such as putting all exams at the end of the term and exams being divided into different stages. I strongly prefer the exams being spread out throughout the semester, while both of these two types of assessment systems have their advantages and disadvantages, which are described as follows.

In terms of exams being spread out throughout the semester, the advantage is that this assessment system helps students evaluate their study stage by stage. Consequently, students can be aware of their weaknesses at each stage and correct them before proceeding to the next stage of their study. However, the disadvantage of this assessment system is that it is a waste of educational resources because university teachers have to spend a lot of time preparing for a large number of examinations, which should be effectively allocated to other aspects instead to improve students' study, such as providing more numbers of tutorials.

On the other hand, regarding putting all exams at the end of the term, the benefit is that such an assessment system is efficient because it allows institutions to examine a large number of examinees together within an extremely short time with just one exam. Nevertheless, the disadvantage is that this assessment system cannot assess students' study comprehensively since limited theories and concepts can be tested, which fails to comprehensively evaluate students' problem-solving and communication skills.

With all the points above, the conclusion can be drawn that putting all exams at the end of the term and exams being spread out throughout the semester have their advantages and disadvantages. However, I prefer the latter one owing to its contribution to students' studies.

(281 words)

城市生活和乡村生活，你喜欢哪个 #101062

**Living in the countryside or having a city life, which one do you prefer?
Please use examples or your personal experience to support your opinion.
#101062**

范文

There is no doubt that the debate over whether to live in urban or rural areas has sparked widespread concern among the general public in contemporary society. From my perspective, I am in favour of residing in cities, and my view is supported by the following reasons.

First and foremost, the most compelling advantage of urban life lies in its highly efficient and convenient transportation system. To be specific, metropolises are equipped with diverse and well-developed public transport facilities, including subways, buses and shared bicycles, which enable residents to travel around the city comfortably without the restriction of time or distance. For example, as a resident of Sydney, I can reach my workplace within just 15 minutes by bus, which is almost unimaginable in remote rural areas.

In addition, urban areas provide more abundant job opportunities than rural regions. To illustrate, cities serve as economic and industrial centres, gathering multinational enterprises and industry-leading institutions, which offer job seekers a wider range of choices and better career development prospects. Taking my personal experience as an example, living in Sydney allows me to browse numerous job vacancies and explore diverse career paths, whereas my sister, who lives in a rural area, often finds it difficult to hunt for a well-paid job.

Taking all these factors into consideration, despite the peace and quiet of rural life, I still firmly prefer living in the city for its efficient transportation and sufficient job opportunities.

(239 words)

医生网络沟通好不好 #101063

Now doctors can talk to patients by using internet-based communication in the office. Discuss the advantages and disadvantages. #101063

范文 1

There is no doubt that doctors can talk to patients using internet-based communication in the office. Some people argue that this new chatting method is beneficial, whereas others disagree. I strongly believe that doctors using Internet-based communication to talk to their patients has both advantages and disadvantages, which can be supported by the reasons as follows.

The foremost advantage is that using internet-based communication largely decreases the time patients spend seeing a doctor. Explicitly, patients can register and wait for medical consultations online at home, so they can save the time spent on traveling to hospitals, which can be allocated to other more valuable tasks. This can be supported by the case of the hospital in my community, which has successfully decreased patients' waiting time after the hospital started to use an internet-based communication platform.

On the other hand, the disadvantage is that Internet-based communication increases the risk of misdiagnosis. Specifically, without physically examining the patients, the doctor can only make judgments based on the patient's verbal description, which is not precise most of the time. This can be supported by a recent report conducted by Peking University that the rate of misdiagnosis has increased by 30% after the Internet-based communication system was introduced to Chinese hospitals.

With all the points above, the conclusion can be drawn that doctors using Internet-based communication to talk to their patients has both merits and problems because it saves the patients' waiting time but increases the risk of misdiagnosis.

(245 words)

Now doctors can talk to patients by using internet-based communication in the office. Discuss the advantages and disadvantages. #101063

范文 2

There is a controversy about the means of communication between doctors and patients. Some people think that doctors communicating with their patients through computers is beneficial. Personally speaking, internet-based communication between doctors and patients has both advantages and disadvantages.

On the one hand, the key benefit is that doctors talking to patients using internet-based communication in the office can improve accessibility for disabled patients. To elaborate, it is difficult for people who have movement disabilities to see a doctor in person because they are confined to their beds and unable to walk on their own, so online consultation allows patients to easily get access to healthcare professionals without physical assistance. For example, my paralyzed sister Merry couldn't attend a face-to-face appointment with her doctor, but she could seek advice directly just at home after a computer-based consultation was implemented.

On the other hand, doctors assessing patients through internet-based communication increases the risk of error in clinical services. To illustrate, virtual clinical treatment decreases interactions between patients and doctors, such as listening to the heartbeat or taking an X-ray, which leads to a low quality of health informatic records because doctors cannot collect sufficient evidence to diagnose a disease. Therefore, doctors may run the risk of faulty clinical treatment. For example, one report of Oxford University stated that the rate of misdiagnosis increased by 50% in China in 2002 after the implementation of online clinical treatments.

In conclusion, doctors consulting with patients based on internet-based communication have both advantages and disadvantages, as it increases accessibility for disabled patients, whereas it may also cause misdiagnosis.

(263 words)

平价公交的优点 #101065

What are the advantages of cheaper public transportation? What will it cost to achieve it? #101065

范文 1

There is no doubt that the cost of public transportation has decreased significantly over the last century. Some people argue that cheaper public transportation leads to some advantages, whereas others disagree. I strongly believe that there are some advantages of cheaper public transportation, and I will also discuss the cost to achieve it.

One advantage of cheaper public transportation is that it helps to relieve global warming by reducing emissions of carbon dioxide. Specifically, cheaper public transportation leads to individuals' increasing willingness to take public transportation instead of driving a private car, which is the main source of greenhouse gas emissions. This can be supported by the example of my home city, Chengdu, in which the carbon emissions have been reduced by 50% since the government reduced the cost of public transportation by 30% in 2012.

On the other hand, in order to achieve this, the government should devote sufficient efforts to raising financial capital to support the development of affordable transportation. To elaborate, the government should establish a well-planned fiscal budget and consider offering subsidies to public transportation companies to lower fares. This can be supported by a recent report conducted by Oxford University that countries that have better public transportation budget plans can provide cheaper transportation options to their citizens.

With all the points above, the conclusion can be drawn that the advantage of cheaper public transportation is that it helps to relieve global warming, while governments' appropriate financial planning is required to achieve the goal.

(248 words)

What are the advantages of cheaper public transportation? What will it cost to achieve it? #101065**范文 2**

There is no doubt that cheaper public transportation has many advantages. Personally speaking, I strongly believe that the lower price of public transportation can benefit the public, but it may also incur some costs.

The most important benefit of cheaper public transportation is that it can reduce traffic congestion. This is obvious because public transportation will be chosen by more people when they travel as the price becomes cheaper and it can carry more passengers per time as private cars, so it will reduce the pressure of traffic, especially during busy hours. To further support the statement, a recent report by Harvard University stated that the government of the United States had devoted about 1 billion dollars to creating networks of public transportation, which, on average, reduces traffic congestion in busy areas by 15%.

However, the achievement of cheaper public transportation will increase the financial burden of the government. To be more specific, when public transportation becomes cheaper, the government has to devote more funding to public transportation, which results in more pressure on the government. This can be established by a recent report by Oxford University stated that the price of English public transportation has decreased by 10%, which means the British government has to devote about 50 million pounds to compensate for the funding, and this is very high pressure for the government.

With all the points above, the conclusion can be made that cheaper public transportation can ease traffic pressure. Meanwhile, it will increase the financial pressure on governments. In order to further address this issue, public awareness should be raised to improve the situation.

(268 words)

你国家的教育系统 #101068

What do you think are the strengths and weaknesses of the education system in your own country? Use your own experience to support your idea. #101068

范文 1

There is a controversy about the strengths and weaknesses of the Chinese education system. In China, schools and teachers place a lot on final exams, which not only have benefits but also have weaknesses that we cannot ignore. In this essay, the strengths of weighing heavily on final exams will first be discussed, followed by the weaknesses.

First and foremost, weighing heavily on final exams can reinforce students' knowledge systematically, which is obvious because schools' and teachers' value on final exam marks could encourage students to review all their principles and concepts as a whole in an intensive period. Hence, they are able to connect these concepts under a more systematic structure, which could set a solid foundation for their knowledge. Given my personal experience as an example, I could still remember vividly the reactions in chemistry after graduating 10 years because I had put a lot of effort into studying those during my final exam period.

However, weighing too much on final exams also has weaknesses as it will reduce the efficiency of students' study during the semester weeks, which is reasonable because weighing heavily only on final assessment gives little pressure for students throughout the normal teaching weeks. Thus, students will feel less motivated for their studies. For instance, I always outperformed in the final exams but felt a lack of motivation to study because there was no compulsory assessment in the daily study.

In conclusion, the Chinese education system has the feature of placing heavy emphasis on final exams. It has the strength to reinforce the foundation knowledge of students, but it will reduce the efficiency of students' study throughout the semester.

(275 words)

What do you think are the strengths and weaknesses of the education system in your own country? Use your own experience to support your idea. #101068

范文 2

There is no doubt that our country's education system has various strengths and weaknesses. Personally speaking, I strongly believe that one of the predominant features of the Chinese education system is being exam-oriented, and this essay will discuss its strengths and weaknesses as follows.

Firstly, one strength of the system is that our students can gain a solid learning result through the current exam-oriented educational system. To be more specific, students have weekly and monthly exams to test their academic performance and a significant amount of homework to consolidate their learning results. For example, I graduated from high school with a high distinction level and was able to enter Peking University because the exam-oriented system brought me an excellent learning achievement.

On the other hand, the weakness of the Chinese education system is that students suffer from an extremely overloaded study pressure, which harms their mental health. To be more explicit, students have to sit in front of the desk for a very long time because of the heavy workload, which makes them feel exhausted and thus become depressed. For instance, according to a survey of Fudan University, 50% of Chinese students are suffering from depression and anxiety because of the endless and intensive learning schedules.

To sum up, having considered all the points above, I am surely convinced that the Chinese education system has both strengths and weaknesses, which include the unique learning method and extreme study pressure.

(239 words)

富国帮穷国 #101070

Wealthy nations are required to share their wealth with poorer countries.

What is your opinion? #101070

范文

It is convincing that there is a huge disproportion in terms of wealth and resources across different countries. Some people may argue that strong economies should aid poor countries. I think wealthy nations should not share their wealth with poorer countries, and the essay will elaborate on the main reasons.

First and foremost, giving poor countries money without teaching them how to make money on their own will demotivate less developed countries to improve their situation. In particular, the governments of poorer nations will wait for other countries' donations and become unwilling to put their effort into enhancing their economies, which will create a vicious circle. For example, the unemployment rate in South Africa has been increasing over the past few years, because people have become too lazy to work when they can get free money from developed countries.

In addition, it is unfair for the poor citizens of the wealthy nations that also need financial help. To elaborate, there is a big gap between poor and rich families in their own countries, so people in rich countries would love to shorten the financial distance between the rich and the poor, which requires a huge amount of money. For example, 80% of the people in America want to further develop infrastructure in rural areas to help poor people get a better life in their country.

In conclusion, strong economies should not aid poor countries because it will demotivate those poor countries, and it's unfair to the poor people in rich countries.

学校应该教打字还是手写 #101072

Some schools believe that children should learn typing rather than a good handwriting. How far do you agree with that? Show reasons with your experience. #101072

范文

There is no doubt that some schools believe that children should learn typing rather than good handwriting. Some people agree with this opinion, whereas others disagree. I strongly believe that typing is more important in modern society, which can be supported by the reasons as follows.

First and foremost, typing improves learning productivity. To be more specific, it is faster to record thoughts and complete assignments with the help of a keyboard so that more time can be given to thinking rather than typing. In addition, document editing and proofreading also become effortless by typing. To further support the above statement, I preferred typing the essay when I was a student during my university time because typing is more productive for assignments, which could save me two hours.

Moreover, the second reason for this argument is that typing enhances the presentation quality of essays or papers, which is reasonable because typed words are neat and tidy. Typed words significantly improve the readability of the document and thus give readers a better reading experience. For example, I used to achieve a higher grade if typing was applied instead of handwriting because the teacher could read the papers and understand my perspective easily.

With all the points above, the conclusion can be made that typing is more important than handwriting because typing can improve the efficiency of learning and strengthen the presentation quality of documents. In this regard, universities should advocate for more students to learn typing.

流行文化的大学学位 #101076

Many universities offer degree courses in popular culture, such as popular music and video gaming. Do you think it is appropriate and give reasons to support your idea. #101076

范文 1

There is no doubt that many universities are now offering degree courses in popular culture, such as popular music and video gaming. Some people argue that it is appropriate as universities can equip students with professional skills, whereas others believe it is a waste of educational resources. From my point of view, it is suitable that universities offer degree courses in popular culture.

Firstly, it is undeniable that university degree courses give students opportunities to receive systematic and theoretical training in popular culture. To be specific, popular culture has its unique development history and characteristics, which are hard to be learned systematically through self-study, and universities can provide comprehensive learning materials for people to learn. My friend, for instance, John, obtained his bachelor's degree in popular music through research on theoretical music knowledge and practicing music.

Secondly, it is conspicuous that university degree courses guide students in pursuing their careers. To illustrate, degree courses provided by universities cover almost all aspects of popular culture on the basis of theoretical research and professional practice, which would cultivate essential skills when students enter a professional field in the future. For example, when I was taking the master's course in video gaming, I gained game design skills to show better empathy for user experience, which made me competitive in the job market.

With all the points above, there are lots of benefits that universities provide degree courses in popular culture for students who have particular interests or pursue popular culture as their lifetime career in the future, since universities are qualified to offer students professional training and comprehensive learning materials, which are essential for their career development.

(274 words)

Many universities offer degree courses in popular culture, such as popular music and video gaming. Do you think it is appropriate and give reasons to support your idea. #101076

范文 2

There is no doubt that there is a large number of universities starting to offer a bachelor's degree in culture. Some people argue that pop culture should have a university degree, whereas others disagree. I strongly believe that universities should not offer a degree in pop culture, which can be supported by the reasons as follows.

The foremost reason is that setting a university degree for pop culture overlaps with degrees of other types of culture that are already established. Specifically, the core of pop culture is a mixture of elements from other cultures, such as traditional culture. As a result, the content of the courses in pop culture will be similar to other cultures' courses, leading to a waste of educational resources. This can be supported by my own experience in my home university where I find that the subjects offered by the degree in a traditional culture highly overlap with those in the pop culture degree.

On the other hand, the second reason is that having a university degree in pop culture limits its diversity. This is because university education applies a universal standard, which prevents students from generating innovative and intriguing ideas in pop culture, such as pop music. This can be supported by a recent study conducted by Oxford University that 50% of the newly released pop music by bachelor students is highly similar in style with each other.

With all the points above, the conclusion can be drawn that pop culture should not require a university degree because it overlaps with degrees in other cultures and limits the diversity of pop culture.

(267 words)

文学是浪费时间 #101077

Works of literature are a waste of time for students today. Do you agree and use your own experience? #101077

范文

There has long been a controversy about whether works of literature are a waste of time for students today. Personally speaking, I strongly believe that learning literature works is not a time-wasting activity, which can be supported by the reasons as follows.

The first and most important of my belief is that works of literature would promote students' creativity. To be more precise, some famous novels and poems contain lots of medieval cultural backgrounds that no longer exist, which obviously can motivate students' imagination and creativity. For example, as I read lots of stories about the French Revolution during my literature courses, I couldn't help thinking about and imagining lives in old France in the eighteenth century and started to write my first novel about the busy life of French people at that time.

The second reason for this argument is that literature works provide an opportunity for students to read more about their history and culture. To be more specific, lots of fiction and articles include domestic historical information and backgrounds, which enable children to learn more about things that happened in the old generations in their own countries. To support this statement, I learned lots of interesting historical events by learning Chinese literature during my high school studies. In this case, I had a deep understanding of my own country.

In conclusion, works of literature are not a waste of time for students because they can boost children's creativity, and students can learn more about their own culture by reading them.

(253 words)

聆听者与倾诉者 #101081

In social situations, some people believe that it is better to be a good listener than a good talker. Do you agree or disagree? #101081

范文 1

There is no doubt that whether it is better to be a good listener than a good talker is becoming a popular topic in our society. Some people think being a good listener is better than being a good talker, but personally speaking, I disagree with this opinion, which can be supported by the reasons as follows.

The first reason for my belief is that being a good talker can increase a team's work efficiency, which is obvious because a good talker can clearly express their ideas to colleagues and have efficient communication with teammates, which is very helpful to quickly complete projects. This can be supported by my own experience where I am always able to finish a project quicker with a good speaker than with a good listener.

Another reason for my opinion is that being a good talker can make people feel comfortable during the conversation, which is reasonable because a good talker is skillful in the aspect of communication. For example, they know how to control the pace of the conversation and how to make the conversation atmosphere friendly. This can be established by a study by Oxford University, which stated that 76% of people think they like to have a conversation with a good talker rather than a good listener, as a good talker always makes the conversation cordial and friendly.

In conclusion, I think it is better to be a good talker than a good listener because a good talker can improve work efficiency and make conversation friendly.

(254 words)

In social situations, some people believe that it is better to be a good listener than a good talker. Do you agree or disagree? #101081

范文 2

It is convincing that social life is indispensable in our daily life. In social situations, some people believe that it is better to be a good listener rather than a good talker. In my opinion, I do agree that a good listener is better off than a good talker, and the essay will elaborate on the main reasons.

First and foremost, a good listener has the virtue over a good talker in terms of building up a robust relationship. To be more specific, it is vital to be an active listener to express the counterparts that you are paying attention to them and caring about them, so you can maintain a healthy connection with others if they trust you and rely on you. For example, I am always a good listener who appreciates my customers' words, so there is a firm bond between me and my clients.

In addition, an effective listener has an advantage over a good talker in respect of understanding people's ideas. Explicitly, during social situations, people communicate with each other to exchange opinions, and being a good listener can help individuals have a deep understanding of others' perspectives. For instance, a study by Oxford University states that 80% of citizens believe that listening carefully to others can help them comprehend other people's ideas.

In conclusion, good listeners are better off than good talkers because they can build up a robust relationship and understand each other deeply.

(240 words)

年轻人 25 岁后才准开车投票 #101085

Some people believe that young people can do things such as diving or voting until they are at least 25 years old. Discuss and give your opinion with examples. #101085

范文

In recent days, it has been proposed that young people are not allowed to drive and vote because they lack experience and are not responsible. As far as I am concerned, I disagree with this point of view.

First of all, young people are entitled to voting and driving even if they lack relevant experience. To be more specific, youngsters are mostly fast learners, which allows them to learn the methods of voting and driving quickly and then accumulate experience. In this case, they can vote and drive like adults. For example, a study conducted by Melbourne University has shown that young people can learn how to drive and vote at a rate that is 78% faster than older people, which helps them obtain the related experience more quickly.

In addition, it is undeniable that good schooling can develop a sense of responsibility in young people to drive or vote, which is obvious because youngsters can be taught courses associated with morality and human rights at school. In this regard, young people can recognize the significance of genuine voting and behave well on the road as drivers. For instance, one of my friends had a better understanding of reasons why citizens need to vote and also of how to vote appropriately through the relevant curricula back in school, and now she feels responsible for her voting right and puts much weight on her decision when voting for the president.

In conclusion, youngsters should be encouraged to vote and drive as they can accumulate experience by learning fast and become responsible through a range of high-quality courses at school.

(268 words)

政府不应该承诺经济持续增长 #101098

Governments promise continuous economic growth, but it's actually an illusion. Some people think that governments should abandon this. Please discuss the validity and the implications. #101098

范文 1

Whether the promise from governments for economic growth is an illusion or not attracts enormous controversy in society. Many people think that governments should abandon the promise. In my view, governments promising continuous economic growth are invalid, which brings negative implications.

First and foremost, governments' promises are invalid, and the government should abandon the promise of continuous economic growth because economic growth cannot be controlled by the government's manipulation. To be explicit, many other factors can influence economic growth, such as globalization, natural disasters, and economic cycles, so government policies cannot ensure sustained economic growth, meaning it's an illusion. For example, the research from Oxford University shows that 80% of economic growth depends on the economic cycles rather than government promises.

On the other hand, the implication is that governments may lose reputation if these stated economic promises do not come true. To be specific, people may lose confidence in governments because their expectation for economic growth was not met, and people may become disappointed, giving up their support for the governments. For instance, the statistics from Griffith University show that 60% of citizens were losing confidence because people's expectations for economic growth were mismatched with the government's promise.

In conclusion, governments cannot ensure economic growth because economic cycles and other factors can jointly influence economic growth, and the implication is that governments may lose reputation if the promises were not met.

(232 words)

Governments promise continuous economic growth, but it's actually an illusion. Some people think that governments should abandon this. Please talk about the validity and implications. #101098

范文 2

There is no doubt that governments always promise continuous economic growth. Some people point out that governments should abandon this, whereas others hold a different view. Personally speaking, I am convinced that the promise of governments about a continuous economic boost is invalid, and this promise will reduce the public trust in the government.

Firstly, government guaranteeing continued economic growth is actually an illusion because the economic cycle is beyond the control of governments. To illustrate, the economy thrives and recesses based on the stages of the business cycle. Moreover, the effect of government policies on the economy is minor. Therefore, governments cannot achieve economic growth during deep recessions. For example, a study by Oxford University in 2012 states that due to the nature of the economic cycle, the government's commitment to the sustained development of the economy is unachievable.

Additionally, the promise regarding sustained economic growth damages public trust in governments. To elaborate, governments cannot realize their promises for various reasons. Once citizens find that the economic promise by the governments turns out to be an illusion, they would no longer believe in the governments' statements in other fields. For instance, research conducted by Cambridge University in 2018 found that the confidence of the citizens fell by 15% because of the government's invalid promise on the economy.

To conclude, I firmly believe that governments should not promise a sustainable economic boost because it is unrealistic. In addition, the implications of this commitment include the loss of public trust.

(249 words)

人类活动导致气温上升 #101099

**Lots of scientists agreed that human activities increase global temperatures. Do you agree? Please give solutions to global warming.
#101099**

范文

There is no doubt that many scientists believe that human activities increase global temperatures. Personally speaking, I agree with this statement, which can be supported by the reason as follows, and I will also provide a solution to global warming.

The reason for my belief is that too much greenhouse gas generated by cars has been discharged into the atmosphere because more and more people rely on cars when they travel, and too much exhaust emission from cars causes an increase in temperatures. This can be supported by my own experience where I always feel warmer in cities than in the countryside because there are more cars on the road in cities.

The solution to this issue is to plant more trees, especially in places where more cars are used, as trees can absorb greenhouse gas and produce oxygen at the same time, and oxygen is helpful for reducing the temperature. This can be established by a study by Oxford University that 76% of scientists agree that trees can absorb car emissions and prevent the temperature from getting too high by releasing oxygen.

In conclusion, I agree with the scientists' opinion that global temperatures are increasing because of human activities, and the solution to this problem is planting more trees.

(210 words)

课外活动对中小学生和大学生都很重要 #101111

It is equally important for school children and university students to be involved in extracurricular activities, as it is good for academic studies and examinations. What's your opinion? Use your experience or examples to support. #101111

范文

There is no doubt that involvement in extracurricular activities is good for academic studies and examinations. Some people believe that it is equally important for schoolchildren and university students, whereas others claim that it exerts more negative effects. I strongly believe that both school children and university students should not participate in extracurricular activities, which can be supported by the following reasons.

The first and most important reason for my belief is that extracurricular activities would consume children's time and energy in developing their interests. It is evident because engaging in extracurricular activities such as playing sports or studying the arts would take children much time every day, which leaves only a few hours for them to focus on their interests. To further support the above statement, I already feel stressed after extracurricular activities and would not have enough time to do my hobbies during my primary school time.

On the other hand, the second reason for this argument is that many social activities, which are crucial for university students, would be negatively affected by the extracurricular activities. It is reasonable because after various social activities, university students would have little energy and time to join in social activities such as communication and teamwork. This can be established by my own experience where I did not have much time for social activities because I overloaded extracurricular activities in university.

With all the points above, the conclusion can be made that involvement in extracurricular activities is not important for both school children and university students, because children will have less time practicing hobbies, and university students will have fewer opportunities in social activities.

(272 words)

与书本，正统教育相比，人生经历经验是更好的老师？ #101122

Some people argue that experience is the best teacher. Life experiences can teach more effectively than books or formal school education. How far do you agree with this idea? Support your opinion with reasons and/or your personal experience. #101122

范文 1

There is no doubt that life experiences can teach more effectively than books or formal school education. Some people point out that they agree that experience is the best teacher, whereas others believe that they disagree with this idea. Personally speaking, I agree that life experiences are more beneficial than books or formal school education.

The first and most important reason for my belief is that life experiences enhance problem-solving skills because they can learn from the process of how to solve problems at the same time. To further support the above statement, I have learned problem-solving skills when I was working as a part-time waitress during my university days, which makes me think that the life experience that I gained will help in my entire life.

On the other hand, the second reason for this argument is that life experiences promote the competitiveness of a person in their future job. To be more specific, when the moment they gain life experiences, they can practice and get ready to apply the experiences in their future job. To support this statement, the experience I had indeed helped my career.

With all the points above, the conclusion can be made that life experiences can teach more effectively than books or formal school education. In this regard, schools should educate the students on the importance of life experiences.

(225 words)

Some people argue that experience is the best teacher. Life experiences can teach more effectively than books or formal school education. How far do you agree with this idea? Support your opinion with reasons and/or your personal experience. #101122

范文 2

In the prosperous world, whether experience is more effective and useful than books and formal education is debatable. Some claim that practical skills cannot help people gain a high distinction in university, while others disagree. Personally speaking, experience and formal education are equally essential.

First and foremost, life experiences are useful and effective as they enable individuals to acquire practical methods. To elaborate, people are trained to conquer difficulties by realistic operations, so their skills are more applicable in life, which implies a more referential value. For instance, my work experiences, rather than textbook theories, helped me learn business operations more efficiently.

However, formal education is crucial as it equips youngsters with comprehensive knowledge through a well-designed curriculum. Specifically, conventional education has a systematic knowledge structure that offers students the intellectual capital in diverse subjects. Irrefutably, only traditional education enables one to be knowledgeable in an integrated way. In my own experience, formal education gave me 80% of the necessary knowledge in various aspects of work, thanks to the well-organized teaching methodology.

By and large, both experience and formal education are significant as they enhance practical skills and more integrated knowledge, respectively.

大学用户电子书还是纸质书 #101123

With the increase of digital media available online, the role of the library has become obsolete. Universities should only procure new digital media rather than constantly update textbooks. Discuss both the advantages and disadvantages of this position and give your own point of view. #101123

范文

There is no doubt that with the increase in digital media available online, the role of the library has become obsolete. I strongly believe that there are both advantages and disadvantages for universities to prepare only digital material rather than printed textbooks, which are discussed as follows.

One advantage is that universities replacing printed textbooks with their digital version is beneficial to make the materials more accessible for students. Specifically, students can borrow materials in the library without any restrictions on loan periods since digital materials have no limitations on quantity. This can be supported by my own experience where I could borrow reference books from the school library much more easily after my university started to replace printed textbooks with digital materials.

On the other hand, the disadvantage of universities only procuring digital materials is that it increases the schools' expenditure. This is because universities need to invest extra money in purchasing the digital version of all the materials that they already have a printed version in their library. This can be established by a recent report conducted by Oxford University that universities promoting digital materials to replace paper textbooks spend 60% more money on filling their library than those that do not.

With all the points above, the conclusion can be drawn that universities only procuring digital materials rather than constantly textbooks has both benefits and drawbacks.

(229 words)

政府应该改善公共交通还是多修路 #101124

As cities are expanding, some people claim governments should look forward to creating better networks of public transport available for everyone rather than building more roads for vehicle owning population. What's your opinion? Give some examples or experience to support.
#101124

范文 1

There is no doubt that the traffic conditions are becoming worse and worse as cities expand. Some people claim the government should create a better network of public transportation for all citizens instead of building more roads for drivers. Personally speaking, I strongly believe the government should pay attention to both approaches, which can be supported as follows.

First and foremost, improved public transport can reduce carbon dioxide emissions, which is obvious because if public transport is improved in terms of time, cost and frequency, there will be more people willing to take it. The more people use public transport, the fewer individuals drive cars. This change leads to less use of private cars, which are the major source of carbon dioxide emissions. This can be supported by a report by the Department of Transport and the University of Melbourne indicating that the total amount of annual carbon dioxide emissions has decreased significantly by over 50% since the new bus system was established in 2001.

On the other hand, building more roads for car owners brings numerous job opportunities. To be more specific, building or widening roads potentially includes work on related surroundings, such as traffic lights, traffic signs, and trees. Thus, working on all these requires laborers and professionals. Besides, after a road is built, new stores will gradually open along with it, offering more job positions such as sales, designers, technicians, and engineers. This can be established by a study by the Department of Employment showing that about 80% more jobs are offered in the areas near road construction than elsewhere in 2010.

In conclusion, considering reducing carbon dioxide emissions and bringing job opportunities, I believe that the government should take action in both enhancing public transport systems and building roads.

(293 words)

As cities are expanding, some people claim governments should look forward to creating better networks of public transport available for everyone rather than building more roads for vehicle owning population. What's your opinion? Give some examples or experience to support.
#101124

范文 2

There is no doubt that our cities are expanding rapidly. Some people point out that governments should create better networks of public transportation, whereas others believe that the government should build more roads for vehicle vehicle-owning population. Personally speaking, I strongly believe that creating more networks of public transportation is more necessary.

The first and most important reason for my belief is that building better networks of public transportation can alleviate air pollution. To be more specific, public transportation, which is based on electricity, is much more environmentally friendly because it has fewer sulfide emissions by using clean energy. As a result, air pollution can be reduced to a certain extent. For example, according to a study conducted by Cambridge University, sulfide emissions reduced by 10% in 2016 after the UK government put two more subways into operation.

The second reason for this argument is that better networks of public transportation can relieve traffic congestion. In other words, public transportation can carry more people than individual automobiles in much less space, which helps riders avoid the stress that comes from daily driving in highly congested areas. To further support the above statement, in the past few years, I spent more than one hour driving from my workplace to my home. However, since railways were built in my city this year, driving home only costs half an hour.

With all the points above, the conclusion can be made that the government should build better networks of public transportation because it can not only eliminate air pollution but also relieve traffic congestion.

(260 words)

工人护士应该有更高的薪水 #101125

Many workers like nurses and teachers should get more pay, especially in recent years people in finance/film actors and company leaders were paid a larger amount of sum. To what extent do you agree or disagree with the above statement and what's your opinion? #101125

范文

There is no doubt that there are many workers and nurses working with low income. Some people argue that workers and nurses should be offered a higher wage, whereas others disagree. I strongly believe that workers and nurses should be paid more, which can be supported by the reasons as follows.

The first reason is that workers and nurses are more likely to have poor health conditions due to their heavy workloads. In this regard, workers and nurses deserve a higher wage to cover the high costs of their medical treatments. This can be supported by a recent report in the country I live in, China. The report indicates that 75% of workers and nurses in China suffer from occupational diseases, and most of them are unable to afford their medical treatments with their low income.

On the other hand, the second reason is that offering a higher wage to workers and nurses is beneficial to curbing the crime rate. This is because a higher wage motivates potential criminals to choose to become a worker or a nurse instead of committing crimes to support their lives. This can be established by a study published by Oxford University that the crime rate in the UK has decreased by 20% since 2010, owing to a policy that the British government increase the income of workers and nurses by 30%.

With all the points above, the conclusion can be drawn that workers and nurses should be paid more because they deserve a higher income to cover their costs of medical treatments, and offering a higher income helps curb the crime rate.

(268 words)

兼顾工作和私人生活（普遍性与后果） #101126

**The time people devote to jobs leaves very little time for personal life.
How widespread is the problem? What problem will this shortage of time
cause? #101126**

范文 1

Many people argue that the time people devote to their work leaves very little time for their personal life. Personally speaking, I strongly believe this trend is extremely widespread, and the shortage of time in personal life will cause serious problems, which will be explained by the following reasons.

First and foremost, the problem of people failing to balance life and work is extremely widespread because of the intense competition in the job market. To be more specific, since people are facing a highly competitive job environment, they have to sacrifice their leisure time to complete their workloads. For example, I have read a recent study by Oxford University stating that 80% of people believe it is quite widespread that people have spent too much time in their jobs.

Moreover, this shortage of time in personal life will cause family issues. To be more explicit, since less time is devoted to personal life, it is quite hard for people to take care of their spouse and children, causing family fights and relationship breakdown. For instance, a recent study conducted by Cambridge University shows that spending too much time on a job increases 52% of family issues.

In conclusion, the trend that people devote much time to the job and leave little time for personal life is extremely widespread. It is obvious that this trend can cause many bad family issues.

(230 words)

**The time people devote to jobs leaves very little time for personal life.
How widespread is the problem? What problem will this shortage of time
cause? #101126**

范文 2

The time people devote to the job leaves very little time for their personal life. Some people believe that the balance between work and life is critical, whereas others disagree. Personally speaking, this problem is extremely widespread and it causes many problems in our society.

On the one hand, the time people devote to a job leaving very little time for personal life is a normal phenomenon among accounting professionals. To be specific, people who are accountants or auditors need to spend a long time getting in touch with their clients for document updates and providing business advice. In this case, they will be overwhelmed by a massive amount of work every day, especially in the tax season, so they can only have little time for their personal life. To further support the above statement, it can be established by research by Oxford University, which stated that more than 80% of accountants and auditors always work overtime and have little spare time.

On the other hand, when jobs take over personal life, it can cause mental disorders. This is because one's energy is limited and they need to enjoy their personal life to get relaxed and refreshed. Therefore, they may develop depression and anxiety if they focus on work for a long period of time without enough rest. For example, it can be established by a survey, which stated that more than 70% of people who are always working overtime agree that they developed mental disorders because of insufficient time for personal life.

In conclusion, the problem of insufficient time for personal time caused by jobs is extremely widespread, especially in the accounting sector, and it may cause mental disorders if the balance between life and work is not maintained.

(290 words)

兼顾工作与生活（重要性 with 原因） #101127

Nowadays, it is increasingly more difficult to maintain the right balance between work and other aspects of one's life, such as time with family and leisure needs. How important do you think this balance is? Why do people find it hard to achieve? #101127

范文

There is no doubt that it is increasingly more difficult to maintain the right balance between work and other aspects of one's life. Some people state that balance is important, whereas others disagree. I strongly believe that it is extremely essential for individuals to maintain a balance between their employment, but it is hard to achieve.

Firstly, the balance between work and other aspects of one's life is extremely essential for individuals because it is closely related to their mental health. Specifically, maintaining the balance helps individuals to keep an optimistic status because their jobs can provide them with a sense of accomplishment, while enjoying other aspects of life helps them to relieve stress during work. This can be supported by my observation that my colleagues who can maintain a balance between work and life are 69% less likely to suffer from mental diseases.

The reason why people find the balance between work and life hard to achieve is the pressure of the heavy workloads in their workplace. This is reasonable because they need to work overtime, otherwise they might lose their jobs, so they have no time to spend on other aspects of life. This can be established by a recent study conducted by Oxford University that the primary reason for individuals' failure to maintain the balance between work and life is the heavy stress during work.

With all the points above, the conclusion can be drawn that the balance between work and other aspects of life is extremely essential for individuals because it helps them to maintain mental health, while the difficulty is the heavy pressure in the workplace.

描述一个新发明的优缺点 #101128

In our technological world, the number of new inventions has been evolving on a daily basis. Please describe a new invention and explain the impact, either beneficial or detrimental, that you feel it has had on society.
#101128

范文

As the technological world has evolved a lot, there is no doubt that many useful inventions have emerged in recent years. Personally speaking, I strongly believe that the computer, a recent invention, has positive influences on society.

To begin with, the computer can increase the productivity of society. To illustrate, as a computer is based on a powerful database and has much stronger abilities in computing and calculating, it can help people accomplish work more efficiently than before. For example, a company could only complete market analysis in ten days by writing and calculating on paper 100 years ago. However, this work can be finished in an hour today by creating a spreadsheet on the computer.

Furthermore, the computer can help to reduce the labor cost of society. In other words, since the computer has various robust functions and a superior ability to process information than human beings, it can complete complex work by itself instead of four or five people. Thus, direct labor costs would reduce significantly. For instance, in the past, the laboratory of Cambridge University required four people to do scientific research about gene biology, but now they only need one scientist to finish it by utilizing computers. As a result, they saved the direct labor costs of the wages of three people.

To sum up, computers, as a recent invention, can not only increase productivity but also reduce the labor cost of society. Thus, society in this technological world has been positively impacted.

成长环境对人的影响（名人为例） #101129

There are many people who are defined by the place where they grow up. Please think of a celebrity you know who becomes famous because of his/her hometown or the place where he/she grows up. Give examples of how his/her accomplishment is influenced by the place where he/she grows up. #101129

范文 1

There is no doubt that there are many people who are defined by the place they grew up. Personally speaking, I believe that Bill Gates, as the famous information technology leader, is influenced by his hometown, Silicon Valley, which will be explained by reasons as follows.

First and foremost, Bill Gates became the richest person in the world because a lot of venture capital invested in the technology field was prevalent in Silicon Valley. In other words, when he needed money to expand his business to make a fortune, he could easily get access to funds that are aimed at technology companies, which was the explicit advantage of Silicon Valley. For example, once Microsoft, the business founded by Bill Gates, was facing expansion and Bill wanted to earn more money in 2000, he got a two-billion-dollar investment from a foundation based in Silicon Valley.

Secondly, Bill Gates achieved many technologically innovative accomplishments because Silicon Valley offered suitable circumstances for inspiring innovations. To illustrate, since he aimed to develop more advanced IT software, he could get updated news in the information technology fields and adopt ideas from elites in respective areas to apply to software development, which can be a reality only in Silicon Valley. For instance, Gates was developing the Microsoft XP system in 2005, and he absorbed lots of creative ideas from technical peers in Silicon Valley.

In conclusion, Bill Gates has been significantly influenced by his hometown, Silicon Valley, because the place is suitable for financing and innovation.

There are many people who are defined by the place where they grow up. Please think of a celebrity you know who becomes famous because of his/her hometown or the place where he/she grows up. Give examples of how his/her accomplishment is influenced by the place where he/she grows up. #101129

范文 2

There is no doubt that many people have been affected by the environment where they grew up. Personally speaking, one celebrity, Bruce Lee, earns his fame because of his home base, Hong Kong, which can be supported as follows.

First and foremost, the prosperity of the film industry in Hong Kong offered Bruce Lee opportunities to appear in films at a very young age, which paved the way for him to step into the industry later. To be more specific, the film industry was booming in Hong Kong during the 1940s-1950s, and thereby, a higher demand appeared for movie production and actors, which allowed Bruce Lee to get auditions and start his acting career in the early 40s. For example, Bruce Lee was in roughly twenty films as a child actor in the 1940s and became famous after the film industry thrived in Hong Kong.

In addition, the Kung Fu culture in Hong Kong was prevalent in the 1950s, which helped Bruce Lee to obtain a very high level of achievement in Kung Fu. To be more explicit, Hong Kong was embraced by the Kung Fu culture and local schools specialized in teaching a range of Kung Fu styles, which stimulated Bruce to hone his skills in this discipline. Thanks to the environment, Bruce managed to study Kung Fu under the tutelage of a master and achieved very high performance. For instance, Bruce Lee was taught by a master called Yip Man in Hong Kong and became a well-known action hero in many films with his excellent performance of Kung Fu.

With all the points above, the conclusion can be drawn that Bruce Lee's accomplishments have been significantly influenced by Hong Kong's booming movie industry and the Kung Fu culture.

减少工时以缓解失业率 #101132

In modern society, unemployment among young people is a serious problem. One solution is to shorten the working week and put more people to work. Give your opinion of the idea, considering the advantages and disadvantages, whether it can apply to young people or the whole workforce. #101132

范文

There is no doubt that the debate over unemployment among young people has drawn attention from the general public in the modern world. Personally speaking, I firmly believe that although shortening the working week and leaving more people to work has both advantages and disadvantages, it can be applied to the young people.

First and foremost, the most important advantage is that shortening the working week enables young people to balance employment with personal development. To be more specific, reduced working hours will provide young individuals with more time to enhance their professional knowledge and skills, which can ultimately improve their long-term employability. For instance, according to the report from Oxford University, 80% of young workers who participated in skills training during reduced work hours reported competitive working abilities among their colleagues

However, one significant disadvantage is that shortening the working week may create financial pressure for younger people despite remaining employed. To illustrate, a shorter working week means reduced income, which can make it difficult for younger workers to cover daily expenses in first-tier cities. To take recent research from the University of Sydney as an example, 90% of young employees cannot afford their home load if companies shorten working hours and apply a pay cut.

With all the points above, it can be concluded that despite disadvantages, shortening working hours to put more people to work can be applied to young workers. Therefore, it is of utmost that governments should devote time and resources to this situation.

名人是否要放弃隐私 #101134

People who are famous entertainers or sportspeople should give up the right to privacy because this is the price of fame. To what extent do you agree or disagree with this point of view? Give your opinion with your experiences. #101134

范文

There is no doubt that famous entertainers and sportspeople often receive a lot of public attention. Some people believe they should give up the right to privacy because this is the price of fame, whereas others think they still deserve privacy. Personally speaking, people who are famous entertainers or sportspeople should not abandon the right to privacy, which can be supported by the following reasons.

The first and most important reason for my belief is that famous entertainers or sportspeople giving up their privacy will lead to the loss of basic legal rights. To be more specific, abandoning personal privacy may lead to the invasion of personal life, making it hard for them to protect their own rights. From my own experience, my favourite male singer's home address was shared online, and he can barely sue the infringers because millions of people have seen the private information.

On the other hand, famous individuals being deprived of the right to privacy can cause safety risks. To illustrate, the exposure of personal privacy can result in stalking and harassment, which increases the risk of harm. For instance, I read news about a famous actress being murdered by strangers after her hotel information was leaked.

With all the points above, the conclusion can be made that famous entertainers or sportspeople should not surrender their privacy because it is a basic legal right and it also protects their safety.

未来人们工时会减少 #101135

“In the future, people will work less hours at their jobs.” To what extent do you agree with it? Please support your opinion with your own experience. #101135

范文

There is no doubt that the issue of working hours has drawn wide attention from the general public. Personally speaking, I hold the view that individuals will work less hours at their jobs in the future, which can be supported by the following reasons.

First and foremost, the primary reason is that the widespread application of AI technology can reduce working hours. To be more specific, the automated systems powered by artificial intelligence can operate independently with minimal human intervention, thus requiring fewer working hours from employees. For example, a study conducted by the Australian government shows that robots and AI can replace humans in performing repetitive tasks, reducing daily working hours to just four hours.

On the other hand, another reason is that the popularity of a healthy lifestyle will lead to shorter working hours. To illustrate, with growing awareness of work-life balance, people tend to work fewer hours and devote more daily time to their personal lives. Taking my own experience as an example, I value my leisure time more than career achievements, so I applied for a part-time job that only requires three hours of work per day.

To sum up, it is reasonable to conclude that people are likely to work fewer hours in the future due to the widespread use of technology and growing awareness of a balanced lifestyle. Therefore, the government should enact employment laws to regulate companies.

年龄限制 #101136

Age restrictions can be seen everywhere. It is believed that people should not do things until they reach the right age, such as marriage, and driving. Select one activity and state the minimum age that you think. Support with your own experiences. #101136

范文

There is no doubt that the debate over the appropriate minimum age for driving has aroused widespread public concern in modern society. From my perspective, I firmly believe that 18 should be the legal age for obtaining a driving license, and my reasons are as follows.

First and foremost, setting the minimum driving age at 18 contributes greatly to road safety. Specifically, compared with younger people, individuals who are 18 years old tend to be more emotionally mature and rational when facing emergencies or heavy traffic, which effectively reduces the rate of traffic accidents. To take my own experience as an example, I got my driver's license when I was 20, and I can stay calm on the roads to make safe and responsible decisions.

In addition, establishing 18 as the legal driving age helps improve overall traffic efficiency. To illustrate, young adults at this age usually have better self-control and driving habits. They tend to drive at a stable speed, avoid sharp turns or sudden braking, and follow traffic rules more strictly. According to my own experience, I found Sydney's traffic flow became smoother after Australia required that only people older than 18 could obtain a full driver's license.

In conclusion, considering road safety and traffic efficiency, driving should be permitted only when people reach the minimum age of 18. Therefore, it is crucial for governments to set clear and reasonable age limits and ensure they are strictly enforced.

外语应该成为必修课吗 #101137

Some people think learning a foreign language at school should be compulsory. To what extent do you agree with it? Use your experience or examples to support your viewpoint. #101137

范文

There is no doubt that the debate over learning foreign languages has aroused widespread public concern in modern society. From my perspective, I firmly believe that learning a second language should be made compulsory in schools, and my reasons are as follows.

First and foremost, making foreign language learning compulsory enables students to view the world from different perspectives. Specifically, when learning a new language, students are naturally exposed to diverse cultures, histories and traditions, which broadens their thinking and helps them analyze real-life issues from multiple angles. For instance, I have once read a report from Oxford University, showing that 80% of students who studied a second language considered themselves more open-minded than those who did not.

In addition, requiring foreign language study at school can significantly enhance students' competitiveness in the job market. To illustrate, many employers favor applicants who can speak more than one language, as they are able to communicate smoothly and professionally with international clients. According to my own experience, my employers value me in the workplace because as a bilingual candidate, I can perform better in winning contracts with multinational client group.

In conclusion, based on the points mentioned above, schools should make learning a foreign language a compulsory subject. Therefore, it is crucial for schools to allocate sufficient time and resources to foreign language education.

国家把钱花在建筑修复，而非现代住房 #101138

Many countries spend large amounts of money on the restoration of historic buildings rather than on modern housing. To what extent do you agree or disagree with this analysis? What are advantages and disadvantages of this? Support your writing with your experience or examples. #101138

范文

There is no doubt that the debate over whether public funds should be allocated to the restoration of historic buildings has aroused widespread concern among the general public today. From my perspective, I firmly hold the view that governments should invest heavily in restoring historical buildings rather than constructing new modern ones, and there are advantages and disadvantages to it, which can be supported by reasons as follows.

First and foremost, the restoration of historical buildings plays a vital role in protecting cultural heritage. Specifically, preserving old buildings retains evidence of historical lifestyles, enabling future generations to gain a deeper insight into local historical traditions. For instance, a report from Oxford University indicates that 80% of respondents acknowledged that restored heritage sites strengthened their sense of connection to their cultural roots.

On the other hand, restoring historical buildings rather than constructing modern housing can hinder urban development. To illustrate, there will be less space available for modern construction if the historical buildings remain undemolished, which fails to meet the increasing demand for residential space in growing cities. A recent study conducted by the University of Sydney found that over 90% of cities with much historical architecture suffered dilemmas regarding where to construct new developments.

Based on the points above, it can be concluded that governments should put public funds into restoring historical buildings rather than constructing modern buildings, but the advantages and disadvantages of doing so exist simultaneously.

21 世纪的孩子越来越难 #101139

It is getting harder for children to live and grow in the 21st century than in the past. Do you agree or disagree? #101135

范文

There is no doubt that the debate over whether it is harder for children to live and grow in the 21st century than in the past has attracted widespread attention from the general public. Personally, I strongly believe that it is easier for children to grow up in the 21st century.

First and foremost, children growing up in the 21st century can take advantage of higher-quality education. To be more specific, current well-developed education systems provide a wider variety of courses compared with those of previous generations, such as information technology, artificial intelligence and creative arts, which lay a firm foundation for future career development. For instance, a study from the University of Sydney indicated that over 70% of students who received a modern education demonstrated advanced perspectives and opinions on cutting-edge industry.

On the other hand, children living in the 21st century can benefit from a more advanced healthcare system. To illustrate, modern medical facilities and technologies, such as advanced vaccines and digital health monitoring, can provide better health protection and treatment for children. This is supported by a report from the United Nations, which revealed that global child mortality rates have decreased by more than 50% over the past few decades due to improvements in healthcare systems and medical technology.

In a nutshell, I am firmly convinced that it is easier for children to live and grow in the 21st century, because they have better education resources and advanced healthcare systems.

(225 words)

要不要限定最高薪资 #101140

"Should there be a maximum wage for high-paying people." To what extent do you agree with this statement? Please give your reasons and/or arguments. #101140

范文

There is no doubt that some people believe a maximum wage should be imposed on high earners. Personally speaking, I disagree with this opinion, as limiting high incomes may have negative effects on individual motivation and talent management. This view can be supported by the following reasons.

First and foremost, higher salaries can significantly motivate highly educated professionals to perform at a higher level. To be specific, when financial rewards are closely linked to performance, individuals are more willing to take on challenging tasks and responsibilities. For example, a report published by a labour management institution has indicated that 80% of professionals who receive salaries with no limitation tend to achieve higher success than those with lower pay.

On the other hand, cancelling the maximum wage line is beneficial for talent management. To illustrate, competitive salaries with no maximum limitation help companies attract and retain highly skilled and well-educated employees, which directly contributes to business growth and innovation. According to an article by a well-known professor in talent management, over 51% of companies use high salary incentives as a key strategy to motivate their workforce.

In conclusion, imposing a maximum wage on high earners is not a wise decision for society. High salaries not only enhance individual motivation but also play a crucial role in effective talent management and business growth.

(223 words)

既然有人工智能翻译，还需要学外语吗 #101143

Advanced technology such as artificial intelligence can translate a foreign language easily. To what extent do you think learning a foreign language is unnecessary? #101143

范文

Because of the rapid development of artificial intelligence, some people argue that learning a foreign language is no longer necessary. From my perspective, this view is not convincing, and my reasons will be discussed in the following paragraphs.

First of all, learning a new language enables people to understand the culture behind it. This is because a language is an expression of its culture, and language learners can also acknowledge foreign customs and conventions during the learning process, which benefits students in both language skills and cultural literacy. For example, I learn about the history of English and traditional Western festivals such as Christmas and Easter when studying English.

Apart from that, mastering a foreign language also enhances one's competence in the workplace. To elaborate, being able to communicate fluently in different languages allows job seekers to meet the requirements of multicultural companies, providing them with more career opportunities and a wider career path. According to a study by Peking University, 80% of multinational companies in China require their employees to achieve an overall IELTS score of 6.5 to ensure they can work effectively in a multicultural environment.

In conclusion, I do not believe that learning a foreign language has become unnecessary, since it allows people to understand different cultures and improve their competence in the workplace.
